Operations Research Proceedings 2007 Jörg Kalcsics, Stefan Nickel, 2008-03-20 The symposium Operations Research 2007 was held from September 5-7 2007 at the Saarland University in Saarbrücken This international conference is at the same time the annual meeting of the German Operations Research Society GOR The transition in Germany and many other

countries in Europe from a production orientation to a service society combined with a continuous demographic change generated a need for intensified Operations Research activities in this area. On that account, this conference has been devoted to the role of Operations Research in the service industry. The links to Operations Research are manifold and include many different topics which are particularly emphasized in scientific sections of OR 2007. More than 420 participants from 30 countries made this event very international and successful. The program consisted of three plenary sessions and more than 300 contributed presentations which had been organized in 18 sections. During the conference, the GOR Dissertation and Diploma Prizes were awarded. We congratulate all winners, especially Professor Wolfgang Domschke from the Darmstadt University of Technology, on receiving the GOR Scientific Prize Award.

### **Numerical Methods in Finance**

Paolo Brandimarte, 2003-09-29. Balanced coverage of the methodology and theory of numerical methods in finance. Numerical Methods in Finance bridges the gap between financial theory and computational practice while helping students and practitioners exploit MATLAB for financial applications. Paolo Brandimarte covers the basics of finance and numerical analysis and provides background material that suits the needs of students from both financial engineering and economics perspectives. Classical numerical analysis methods, optimization, including less familiar topics such as stochastic and integer programming, simulation, including low discrepancy sequences and partial differential equations, are covered in detail. Extensive illustrative examples of the application of all of these methodologies are also provided. The text is primarily focused on MATLAB-based application but also includes descriptions of other readily available toolboxes that are relevant to finance. Helpful appendices on the basics of MATLAB and probability theory round out this balanced coverage. Accessible for students yet still a useful reference for practitioners, Numerical Methods in Finance offers an expert introduction to powerful tools in finance.

### **A Relaxation-Based Approach to Optimal Control of Hybrid and Switched Systems**

Vadim Azhmyakov, 2019-02-14. A Relaxation Based Approach to Optimal Control of Hybrid and Switched Systems proposes a unified approach to effective and numerically tractable relaxation schemes for optimal control problems of hybrid and switched systems. The book gives an overview of the existing conventional and newly developed relaxation techniques associated with the conventional systems described by ordinary differential equations. Next, it constructs a self-contained relaxation theory for optimal control processes governed by various types/subclasses of general hybrid and switched systems. It contains all mathematical tools necessary for an adequate understanding and using of the sophisticated relaxation techniques. In addition, readers will find many practically oriented optimal control problems related to the new class of dynamic systems. All in all, the book follows engineering and numerical concepts. However, it can also be considered as a mathematical compendium that contains the necessary formal results and important algorithms related to the modern relaxation theory. Illustrates the use of the relaxation approaches in engineering optimization. Presents application of the relaxation methods in computational schemes for a numerical treatment of the sophisticated hybrid switched optimal control problems. Offers a rigorous and self

contained mathematical tool for an adequate understanding and practical use of the relaxation techniques Presents an extension of the relaxation methodology to the new class of applied dynamic systems namely to hybrid and switched control systems
