Machines That Walk The Adaptive Suspension Vehicle:

Machines that Walk Shin-Min Song, Kenneth J. Waldron, 1989 What is 16 feet long 10 feet high weighs 6 000 pounds has six legs and can sprint at 8 mph and step over a 4 foot wall The Adaptive Suspension Vehicle ASV described in this book Machines That Walk provides the first in depth treatment of the statically stable walking machine theory employed in the design of the ASV the most sophisticated self contained and practical walking machine being developed today Under construction at Ohio State University the automatically terrain adaptive ASV has one human operator can carry a 500 pound payload and is expected to have better fuel economy and mobility than that of conventional wheeled and tracked vehicles in rough terrain The development of the ASV is a milestone in robotics research and Machines That Walk provides a wealth of research results in mobility gait static stability leg design and vertical geometry design The authors treatment of statically stable gait theory and actuator coordination is by far the most complete available Shin Min Song is an Assistant Professor in the Department of Mechanical Engineering at the University of Illinois at Chicago Kenneth J Waldron is Nordholt Professor in the Department of Mechanical Engineering at Ohio State University

Technology Developments: the Role of Mechanism and Machine Science and IFToMM Marco Ceccarelli, 2011-05-26 This is the first book of a series that will focus on MMS Mechanism and Machine Science This book also presents IFToMM the International Federation on the Promotion of MMS and its activity This volume contains contributions by IFToMM officers who are Chairs of member organizations MOs permanent commissions PCs and technical committees TCs who have reported their experiences and views toward the future of IFToMM and MMS The book is composed of three parts the first with general considerations by high standing IFToMM persons the second chapter with views by the chairs of PCs and TCs as dealing with specific subject areas and the third one with reports by the chairs of MOs as presenting experiences and challenges in national and territory communities This book will be of interest to a wide public who wish to know the status and trends in MMS both at international level through IFToMM and in national local frames through the leading actors of activities In addition the book can be considered also a fruitful source to find out who s who in MMS historical backgrounds and trends in MMS developments as well as for challenges and problems in future activity by IFToMM community and in MMS at large

Walking Machines D. J. Todd, 2013-03-08 The first chapter of this book traces the history of the development of walking machines from the original ideas of man amplifiers and military rough ground transport to today s diverse academic and industrial research and development projects It concludes with a brief account of research on other unusual methods of locomotion The heart of the book is the next three chapters on the theory and engineering of legged robots Chapter 2 presents the basics of land loco motion going on to consider the energetics of legged movement and the description and classification of gaits Chapter 3 dealing with the mechanics of legged vehicles goes into leg number and arrangement and discusses mechanical design and actuation methods Chapter 4 deals with analysis and control describing the aims of control

theory and the methods of modelling and control which have been used for both highly dynamic robots and multi legged machines Having dealt with the theory of control it is necessary to discuss the computing system on which control is to be implemented This is done in Chapter 5 which covers architectures sensing algorithms and programming languages Chapter 6 brings together the threads of the theory and engineering discussed in earlier chapters and summarizes the current walking machine research projects Finally the applications both actual and potential of legged locomotion are described

Introduction Research into legged machines is expanding rapidly There are several reasons why this is happening at this particular time

International Symposium on History of Machines and Mechanisms Proceedings HMM 2000 Marco Ceccarelli, 2013-11-11 The International Symposium on History of Machines and Mechanisms is a new initiative to promote explicitly researches and publications in the field of the History of TMM Theory of Machines and Mechanisms It was held at the University of Cassino Italy from 11 to 13 May 2000 The Symposium was devoted mainly to the technical aspects of historical developments and therefore it has been addressed mainly to the IFToMM Community In fact most the authors of the contributed papers are experts in TMM and related topics This has been indeed a challenge convincing technical experts to go further in depth into the background of their topics of expertise We have received a very positive response as can be seen by the fact that these Proceedings contain contributions by authors from all around the world We received about 50 papers and after review about 40 papers were accepted for both presentation and publishing in the Proceedings This means also that the History of TMM is of interest everywhere and indeed an in depth knowledge of the past can be of great help in working on the present and in shaping the future with new ideas I believe that a reader will take advantage of the papers in these Proceedings with further satisfaction and motivation for her or his work historical or not These papers cover the wide field of the History of Mechanical Engineering and particularly the History of TMM
