Managing Chaos and Complexity in Government L. Douglas Kiel, 1994-09-20 To keep government operating smoothly changes in public management policy and strategy usually follow the old rule of change that it must evolve in a systematic and incremental fashion But in today's unpredictable world of shrinking budgets demands for better service and greater accountability playing by the old rules just doesn't make sense In this book L Douglas Kiel presents a framework that addresses the new chaotic reality of public management and the need for responsive change and innovation By acknowledging the potential for positive change and renewal that can arise from uncertainty and instability Kiel offers managers a paradigm for transforming government performance In easy to understand terms the author offers an overview of the concepts of chaos theory and the science of complexity and he demonstrates how public administrators can apply these concepts to create a new vision of organizational change The book presents a range of both traditional and innovative management techniques shaping organizational cultures flattening hierarchies and re engineering work and evaluates their capacity to allow organizational systems to respond to change Written for public administrators and the faculty and students of public management this book describes the importance of disorder instability and change and examines how new chaos theories are applied to public management Drawing on data from the author's case studies the book is filled with charts graphs and practical computer spreadsheet exercises designed to give public managers and students of public management hands on experience to meet the challenges of organizational change

Breaking the Phalanx Douglas A. Macgregor, 1997-01-30 This work proposes the reorganization of America s ground forces on the strategic operational and tactical levels Central to the proposal is the simple thesis that the U S Army must take control of its future by exploiting the emerging revolution in military affairs The analysis argues that a new Army warfighting organization will not only be more deployable and effective in Joint operations reorganized information age ground forces will be significantly less expensive to operate maintain and modernize than the Army s current Cold War division based organizations And while ground forces must be equipped with the newest Institute weapons new technology

will not fulfill its promise of shaping the battlefield to American advantage if new devices are merely grafted on to old organizations that are not specifically designed to exploit them. It is not enough to rely on the infusion of new expensive technology into the American defense establishment to preserve America's strategic dominance in the next century. The work makes it clear that planes, ships, and missiles cannot do the job of defending America's global security issues alone. The United States must opt for reform and reorganization of the nation's ground forces and avoid repeating Britain's historic mistake of always fielding an effective army just in time to avoid defeat but too late to deter an aggressor.

Between Globalization and Integration Sebastian Vaduva, 2016-02-23 This volume focuses on the integration and globalization of Romania, a prominent emerging market in South Eastern Europe and one of the major players in the securitization of the Black Sea and the Eastern European border as both a part of NATO since 2004 and a fully integrated EU Member State since 2007. It will examine the challenges the country has faced in its progression from totalitarianism to democracy through several waves of reform intended to update and streamline its political and economic processes for success in the free market capitalist arena. Having learned the hard way about some of the key aspects of public administration, Romania has learned a place for itself among the diverse global players of Europe and beyond. The first section reviews current perspectives on globalization and its impact in the late 20th century. It has flattened the Earth, generating better communication and exchanges than ever before, but also gathering a fair amount of criticisms from commentators seeing it as little else than neo colonialism. Cooperative administrative strategies are being suggested instead in order for new public administration patterns to smoothly run in coordination with the globalized world. In the second section, the European Union is described as a complex multi-level socio-political entity itself, historically in turmoil over its own style of rule: e.g. hierarchy vs. coordination, integration vs. centralization, etc. or even its own existence, as the European dream seemed to be losing steam with the general population of Europe several times in the previous century. Powers and responsibilities of the European institutions and agencies are also discussed. Thirdly, the recent history of Romania is approached from the Europeanization context, starting from its post 1989 days of confusion and of attempting to jumpstart democracy. Eventually, it has to undergo a series of reforms and internalize some principles fundamental to the EU in order for the much-awaited accession to occur and its multiple effects to start taking place. A country with a rich cultural heritage and straddling multiple socio-political axes, Romania has plenty more to offer in the new geostrategic security and development contexts of the 21st century Europe. As such, this volume provides inspiration for further research and practical application opportunities on topics of local European and global significance.

Satan and the Problem of Evil Gregory A. Boyd, 2001-10-08 Gregory Boyd seeks to defend his scripturally grounded trinitarian warfare theology with rigorous philosophical reflection and insights from human experience and scientific discovery.

Elliott, L. Douglas Kiel, 1999 Introduces those with an interest in the policy sciences to the field of non linear dynamics and complex systems and their applications to problems of public policy Four of the nine contributions concentrate on the implications of nonlinear dynamics and complexity for understanding the evolution of economic systems or instruments of economic policymaking Three papers explore a set of non economic related policy areas involving dynamics at a reduced level of aggregations from macroeconomic phenomena The final contributions consider information technology and the challenge of time

Reframing Complexity Fritjof Capra, 2007 Havana s Instituto de

Filosofia s First Biennial International Seminar on the Philosophical Epistemological and Methodological Implications of Complexity Theory was held in January 2002 in Havana Cuba s capital city The seminar was aimed at familiarizing Cuban researchers and professors in a more direct way with some of the current trends and widespread scope of the expanding field of complexity thinking affording them the possibility of personal contacts with some of the people engaged in that effort The seminar was attended by specialists from fifteen countries ranging from Chile to Australia along the West East axis and from Norway to South Africa along the North South one There were participants from developed and underdeveloped countries This book contains selected papers from the Complexity 2002 seminar edited by Fritjof Capra author of *The Tao of Physics* *The Web of Life A New Scientific Understanding of Living Systems* and *The Hidden Connections A Science for Sustainable Living* Alicia Juarrero author of *Dynamics in Action* Pedro Sotolong and Jacco van Uden author of *Complexity and Organization* The papers have been organized in four parts I Sources of Complexity Science and Information II Philosophical Epistemological and Methodological implications III Organizational Implications IV Global and Ethical Implications The papers in Part I can be said to approach the phenomenon of complexity at a very basic level Here the issues being addressed revolve around the very fundamental question of why the complexity sciences are so important What are the most fundamental lessons to be learned from studying complex systems Papers included in Part II engage in a broader philosophical investigation of some of the most general ontological epistemological and methodological implications of the complexity approach showing how very old questions are currently being reformulated and or reinterpreted in the light of complexity thinking Papers that appear in Part III address various important issues about the links between complexity and social organizational business and management questions Finally Papers in Part IV return once again to more global implications of Complexity thinking this time dealing with Ethical and Globalization issues of contemporary world

The Legacy of Herbert Simon in Economic Analysis Peter E. Earl, 2001 **Future Survey Annual** ,1996 *A New Mind for Policy Analysis* Goktug Morcol, 2002-12-30 Morcol argues that the objectivist and deterministic assumptions of mainstream policy analysis which are based on the Newtonian positivist worldview or mind set should be transcended After demonstrating that the favored methods of mainstream policy analysis are based on Newtonian ontological and positivist epistemological assumptions and that the connections between these two are intimately and historically related he critically assesses and highlights the contributions of quantum mechanics complexity theory and cognitive science to a new mind set in scientific knowledge a post Newtonian and postpositivist mind set Newtonian positivist and post Newtonian postpositivist worldviews are conceptualized as fuzzy mind sets that is they are not mutually exclusive and that they share assumptions at varying degrees Cognitive science shows that some of the fundamental concepts and assumptions of the Newtonian positivist philosophy such as the concept of causality and the tendency to categorize reality reductionist thinking are the products of the evolutionary adaptation of the human mind and they have become its built in defaults As Morcol suggests we cannot change

the biological defaults of our minds but we can change our way of thinking to an extent through a cultural evolution He argues that conscious efforts can be made in policy analysis education to help move our thinking toward a post Newtonian and postpositivist policy analysis Of particular interest to scholars and advanced students dealing with policy analysis public administration and political science especially those concerned with epistemology and methodology
