

DC Circuit Builder – Parallel Circuit

Goal: To analyze mathematical relationships between quantities for parallel circuits.

Getting Ready: Using your computer, tablet or phone and navigate to:

<http://goo.gl/M4Ewmh>

Tap or click the link to open the DC Circuit Builder. Once opened, select the pencil icon and use the tools (at the bottom of the screen) to build a circuit. Simply select a bulb, resistor, wire or ammeter (the rectangular box) and tap or click in the workspace where you wish it to be located. You'll get the hang of it quite quickly.

Note that the electric potential values are listed on the diagram at the corner of every square on the grid. Current values are listed on the ammeters. To change a battery voltage or a resistor value, select the second icon at the bottom of the screen; a magnifying glass appears above the circuit element. Adjust the voltage or the resistance using the up/down arrows next to the digital meter.

Build, Measure, Analyze:

Build the circuit shown with three resistors, four ammeters and a battery. Determine the values of current (amps) and electric pressure (volts) at the indicated locations.

- For resistors 1, 2, and 3 and for the battery (B), calculate the electric potential difference and fill in the table below.

Element	Electric Potential Difference (ΔV)	Current (I)	Resistance (R)
B	$9V - 0 = 9V$	$2.7A$	—
1	$9V$	$0.9A$	$9/0.9 = 10\Omega$
2	$9V$	$0.9A$	$9/0.9 = 10\Omega$
3	$9V$	$0.9A$	$9/0.9 = 10\Omega$

Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers

and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

Bioelectricity Robert Plonsey, Roger C. Barr, 2007-05-30 The study of electrophysiology has progressed rapidly because of the precise delicate and ingenious experimental studies of many investigators The field has also made great strides by using these experimental observations through mathematical descriptions based on electromagnetic field theory electrochemistry etc which underlie these experiments In turn these quantitative materials provide an understanding of many electrophysiological applications through a relatively small number of fundamental ideas This text is an introduction to electrophysiology following a quantitative approach The first chapter summarizes much of the mathematics required in the following chapters The second chapter presents a very concise overview of the principles of electrical fields and the concomitant current flow in conducting media It utilizes basic principles from the physical sciences and

engineering but takes into account the biological applications The following six chapters are the core material of this text Chapter 3 includes a description of how voltages currents exist across membranes and how these are evaluated using the Nernst Planck equation The membrane channels which are the basis for cell excitability are described in Chapter 4 An examination of the time course of changes in membrane voltages that produce action potentials are considered in Chapter 5 Propagation of action potentials down bers is the subject of Chapter 6 and the response of bers to arti cial stimuli such as those used in cardiac pacemakers is treated in Chapter 7 The voltages and currents produced by these active processes in the surrounding extracellular space is described in Chapter 8
