Bulletin of the American Mathematical Society ,1917 *Bulletin (new Series) of the American Mathematical Society* ,1917 *International Catalogue of Scientific Literature* ,1908 *Gears* Vincenzo Vullo,2020-01-24 The book explores the geometric and kinematic design of the various types of gears most commonly used in practical applications also considering the problems concerning their cutting processes The cylindrical spur and helical gears are first considered determining their main geometric quantities in the light of interference and undercut problems as well as the related kinematic parameters Particular attention is paid to the profile shift of these types of gears either generated by rack type cutter or by pinion rack cutter Among other things profile shifted toothing allows to obtain teeth shapes capable of greater strength and more balanced specific sliding as well as to reduce the number of teeth below the minimum one to avoid the operating interference or undercut These very important aspects of geometric kinematic design of cylindrical spur and helical gears are then generalized and extended to the other examined types of gears most commonly used in practical applications such as straight bevel gears crossed helical gears worm gears spiral bevel and hypoid gears Finally ordinary gear trains planetary gear trains and face gear drives are discussed Includes fully developed exercises to draw the reader s attention to the problems that are of interest to the designer as well as to clarify the calculation procedure Topics are addressed from a theoretical standpoint but in such a way as not to lose sight of the physical phenomena that characterize the various types of gears which are examined The analytical and numerical solutions are formulated so as to be of interest not only to academics but also to designers who deal with actual engineering problems concerning the gears *Il politecnico-Giornale dell'ingegnere architetto civile ed industriale* ,1915 *Bollettino delle pubblicazioni italiane ricevute per diritto di stampa* ,1908 *Bollettino delle pubblicazioni italiane ricevute per diritto di stampa* Biblioteca nazionale centrale di Firenze,1911 *Rivista scientifico-industriale delle principali scoperte ed invenzioni fatte nelle scienze e nelle industrie* ,1907

centuries took shape through less well known figures until the more recent times in which Gaspard Monge worked Over the years a gap has been created between Descriptive Geometry and Mechanism Science which now appear to belong to different worlds In reality however there is a very close relationship between the two disciplines with a link based on extremely solid foundations Without the theoretical foundations of Geometry it would not be possible to draw and design mechanical parts such as gears while in Kinematics it would be less easy to design and predict the reciprocal movements of parts in a complex mechanical assembly
