

A male mechanic with a beard, wearing a black t-shirt and grey overalls, is standing in a modern, well-lit automotive workshop. He is focused on a diagnostic tool with a grid of small circular lights, which is connected to a car. In the background, a dark-colored SUV is parked on a lift, and the workshop's structure with large windows and blue pillars is visible.

 Sustainability in the Maritime Domain Angela Carpenter,Tafsir M. Johansson,Jon A. Skinner,2021-05-29 This volume
 explores options for a sustainable maritime domain including maritime transportation such as Maritime Spatial Planning
 MSP maritime education and training maritime traffic and advisory systems maritime security Other activities in the

maritime domain covered in the book include small scale fisheries and sustainable fisheries and greening the blue economy. The book aims to provide the building blocks needed for a framework for good ocean governance, a framework that will serve through the next decade and hopefully well beyond the 2030 milestone of the UN Agenda for Sustainable Development. In short, this book brings together the problems of the current world and sustainable solutions that are in the development process and will eventually materialize in the not so distant future. Additionally, the book presents a transdisciplinary analysis of integral sustainable maritime transportation solutions and crucial issues relevant to good ocean governance that have recently been discussed at different national, regional and international fora, highlighting ongoing work to develop and support governance systems that facilitate industry requirements and meet the needs of coastal states and indigenous peoples, of researchers, of spatial planners and of other sectors dependent on the oceans. The book will be of interest to researchers across many disciplines, especially those that are engaged in cross sectoral research and developments in the maritime transport sector and across the wider maritime domain. To this end, the book covers areas including natural and social sciences, geographical studies, spatial planning, maritime security and gender studies as they relate to transport and the wider maritime sector. In addition, the book explores frameworks for sustainable ocean governance being developed under the UN's Agenda for Sustainable Development to 2030. It will also look beyond the 2030 milestone under that Agenda and will be of use to national and international policymakers and practitioners, government actors at the EU and other regional and national levels and to researchers of ocean governance, sustainability and management and maritime transport.

Management of Marine Plastic Debris Michael Niaounakis, 2017-07-04. *Management of Marine Plastic Debris* gives a thorough and detailed presentation of the global problem of marine plastics debris, covering every aspect of its management from tracking, collecting, treating and commercial exploitation for handling this anthropogenic waste. The book is a unique essential source of information on current and future technologies aimed at reducing the impact of plastics waste in the oceans. This is a practical book designed to enable engineers to tackle this problem both in stopping plastics from getting into the ocean in the first place as well as providing viable options for the reuse and recycling of plastics debris once it has been recovered. The book is essential reading not only for materials scientists and engineers but also other scientists involved in this area seeking to know more about the impact of marine plastics debris on the environment, the mechanisms by which plastics degrade in water and potential solutions. While much research has been undertaken into the different approaches to the increasing problem of plastics marine debris, this is the first book to present, evaluate and compare all of the available techniques and practices and then make suggestions for future developments. The book also includes a detailed discussion of the regulatory environment, including international conventions and standards and national policies. Reviews all available processes and techniques for recovering, cleaning and recycling marine plastic debris. Presents and evaluates viable options for engineers to tackle this growing problem, including the use of alternative polymers. Investigates a wide range of possible

applications of marine plastics debris and opportunities for businesses to make a positive environmental impact Includes a detailed discussion of the regulatory environment including international conventions and standards and national policies
