The Motivated Worker Brad Ward, 2020-11-24. How can managers and executives motivate workers to make them happier and more productive? How can employees find meaning and motivation in their careers? The classic Two Factor Theory, a simple time-tested model for conceptualizing job satisfaction, is here reimagined for a modern world with relevant examples and backed by dozens of academic studies that organizational leaders can draw upon to improve worker motivation. The Universal Dual Factor Survey (UDS) is introduced, providing a means to assess workforce job satisfaction. Managers will be able to understand which factors need improvement, leading to more meaningful work. Employees at all levels of business, government, and nonprofit organizations will be able to improve personal motivation, facilitating a more cohesive and thriving workforce.

Food quality management Pieter Nel Luning, Willem Marcelis, 2025-07-21 Consumer understanding of food quality is crucial as their concerns for healthy, safe, and sustainable food production remain high. This forces actors and stakeholders in the agribusiness and food industry to use quality management as a strategic approach in production and innovation. This book describes Food Quality Management (FQM) in one integrated concept. Firstly, all relevant aspects of food quality management are combined into one FQM function model which shaped the structure of the book chapters. Secondly, the authors have embedded the techno-managerial approach in the book. This approach starts with the notion that food quality is the outcome of the combined effect of food behaviour and human behaviour. The core principle of this approach is the concurrent use of technological and managerial theories and models to analyse food systems behaviour and people's quality behaviour and generate adequate improvements to the system. Topics covered in the book include food quality properties and concepts, essentials of quality management and food technology, and details about food and human behaviour. Furthermore, this book describes in detail the technological and managerial principles and practices in the five FQM functions: quality design, quality control, quality improvement, quality assurance, and quality policy and strategy. Moreover, for each function, a special topic relevant for the function is highlighted, namely consumer-oriented design, product versus resource control, quality gurus, and improvement, quality assurance standards and guidelines like GMP, HACCP, ISO 22000, IFS, and BRC, and Total Quality Management. This publication is a must-have for students, researchers, and agribusiness and food industry professionals active in various areas of food production in the supply chain. The integrated approach with technological and managerial principles and concepts for analysing food
