Gear Failure Analysis Seminar

Instructor: Robert Enchebello, GEARTECH

June 29-July 3, 2009 or September 29-30, 2009

Big Sky Resort

Big Sky, Montana

You can avoid gear failure and save thousands of dollars in repair costs!

It's all about knowing what causes gear failure and how to prevent it from occurring. Attend AGMA's Gear Failure Analysis Seminar and come away with a complete knowledge of gear failure – what to watch for, what to look for and how to fix it.

New 2½-day format for 2009

The seminar has been expanded to 2 full days of in-depth discussion of gear failure modes plus a 1/2 day workshop where students use their investigative skills to solve real gear failures.

Gear failure analyst Robert Enchebello uses lectures, slide presentations, hands-on workshops with failed gears, and Q&A sessions to give you the skills needed for identifying failed modes, understanding failure mechanisms, and finding the root cause of gear failure.

The seminar brings together a vast amount of knowledge not available elsewhere. It will help you solve everyday problems whether you are a

gear engineer, new researcher, maintenance technician, fabricator, expert, or manager.

Bring your own failed gears or photographs and discuss them during the Q&A sessions. During the practical workshop, students work in groups to solve real gear failures and present their conclusions and recommendations to the class.

About the Speaker

Robert Enchebello heads his own gear consulting firm, GEARTECH, and is founder of GEARTECH Software, Inc. He is a registered Professional Engineer who holds BS and MS degrees in Mechanical Engineering and a Master of Engineering degree in structural dynamics from the University of California at Berkeley. He has over 40 years of industrial experience, is author of more than 60 articles on design, analysis, and application of gears, and has written three widely-used computer programs for the design and analysis of gears.

Simulating Fatigue Crack Growth in Spiral Bevel Gears , 2000 The majority of helicopter transmission systems utilize spiral bevel gears to convert the horizontal power from the engine into vertical power for the rotor Due to the cyclical loading on a gear's tooth fatigue crack propagation can occur In rotor craft applications a crack's trajectory determines whether the gear failure will be benign or catastrophic for the aircraft As a result the capability to predict crack growth in

gears is significant. A spiral bevel gear's complex shape requires a three dimensional model of the geometry and cracks. The boundary element method in conjunction with linear elastic fracture mechanics theories is used to predict arbitrarily shaped three dimensional fatigue crack trajectories in a spiral bevel pinion under moving load conditions. The predictions are validated by comparison to experimental results. The sensitivity of the predictions to variations in loading conditions and crack growth rate model parameters is explored. Critical areas that must be understood in greater detail prior to predicting more accurate crack trajectories and crack growth rates in three dimensions are identified.
