Macroeconomic Theory and Stabilization Policy Willem H. Buiter, 1989 *Rational Expectations Models with a Continuum of Convergent Solutions* Michael Mussa, 1984 This paper examines five examples of rational expectations models with a continuum of convergent solutions and demonstrates serious difficulties in the economic interpretation of these solutions The five examples are 1 a model of optimal capital accumulation with a negative rate of time preference 2 Taylor s 1977 linear rational expectations model of macroeconomic equilibrium 3 Calvo s 1984 model of contract setting and price dynamics 4 Obstfeld s 1984 equilibrium model of monetary dynamics with individual optimizing agents and 5 Calvo s 1978 life cycle model of savings and asset valuation In every case when these models yield a continuum of convergent infinite horizon solutions these solutions fail to exhibit economically appropriate forward looking dependence of the endogenous variables on the paths of the exogenous forcing variables a difficulty that does not arise under the circumstances where these models yield unique convergent infinite horizon solutions Further the three models that have natural finite horizon versions either lack finite horizon solutions or have solutions that do not converge to any of the infinite horizon solutions Again this difficulty arises only under the circumstances where these models have a continuum of infinite horizon solutions

Lectures on Macroeconomics Olivier Blanchard, Stanley Fischer, 1989-03-21 The main purpose of Lectures on Macroeconomics is to characterize and explain fluctuations in output unemployment and movement in prices Lectures on Macroeconomics provides the first comprehensive description and evaluation of macroeconomic theory in many years While the authors perspective is broad they clearly state their assessment

of what is important and what is not as they present the essence of macroeconomic theory today The main purpose of Lectures on Macroeconomics is to characterize and explain fluctuations in output unemployment and movement in prices The most important fact of modern economic history is persistent long term growth but as the book makes clear this growth is far from steady The authors analyze and explore these fluctuations Topics include consumption and investment the Overlapping Generations Model money multiple equilibria bubbles and stability the role of nominal rigidities competitive equilibrium business cycles nominal rigidities and economic fluctuations goods labor and credit markets and monetary and fiscal policy issues Each of chapters 2 through 9 discusses models appropriate to the topic Chapter 10 then draws on the previous chapters asks which models are the workhorses of macroeconomics and sets the models out in convenient form A concluding chapter analyzes the goals of economic policy monetary policy fiscal policy and dynamic inconsistency Written as a text for graduate students with some background in macroeconomics statistics and econometrics Lectures on Macroeconomics also presents topics in a self contained way that makes it a suitable reference for professional economists

Learning and Expectations in Macroeconomics George W. Evans, Seppo Honkapohja, 2012-01-06 A crucial challenge for economists is figuring out how people interpret the world and form expectations that will likely influence their economic activity Inflation asset prices exchange rates investment and consumption are just some of the economic variables that are largely explained by expectations Here George Evans and Seppo Honkapohja bring new explanatory power to a variety of expectation formation models by focusing on the learning factor Whereas the rational expectations paradigm offers the prevailing method to determining expectations it assumes very theoretical knowledge on the part of economic actors Evans and Honkapohja

contribute to a growing body of research positing that households and firms learn by making forecasts using observed data updating their forecast rules over time in response to errors This book is the first systematic development of the new statistical learning approach Depending on the particular economic structure the economy may converge to a standard rational expectations or a rational bubble solution or exhibit persistent learning dynamics The learning approach also provides tools to assess the importance of new models with expectational indeterminacy in which expectations are an independent cause of macroeconomic fluctuations Moreover learning dynamics provide a theory for the evolution of expectations and selection between alternative equilibria with implications for business cycles asset price volatility and policy This book provides an authoritative treatment of this emerging field developing the analytical techniques in detail and using them to synthesize and extend existing research

The Macroeconomics of Imperfect Competition and Nonclearing Markets

Jean-Pascal Benassy, 2005-01-14 In this book Jean Pascal Benassy attempts to integrate into a single unified framework dynamic macroeconomic models reflecting such diverse lines of thought as general equilibrium theory imperfect competition Keynesian theory and rational expectations He begins with a simple microeconomic synthesis of imperfect competition and nonclearing markets in general equilibrium under rational expectations He then applies this framework to a large number of dynamic macroeconomic models covering such topics as persistent unemployment endogenous growth and optimal fiscal monetary policies The macroeconomic methodology he uses is similar in spirit to that of the popular real business cycles theory but the scope is much wider All of the models are solved by hand making the underlying economic mechanisms particularly clear

The Dynamics of Keynesian Monetary Growth Carl Chiarella, Peter Flaschel, 2000-08-03 Originally published in 2000 this book is in the tradition of non market clearing approaches to macrodynamic approaches It builds a series of integrated disequilibrium growth models of increasing complexity which display the economic interaction between households firms and government across labour goods money bonds and equities markets Chiarella and Flaschel demonstrate how macrodynamics can be developed in a hierarchical way from economically simple structures to more advanced ones In addition it investigates complex macrodynamic feedback mechanisms

Stochastic Dynamic Macroeconomics Gang Gong, Willi Semmler, 2006-01-19 This is a book on stochastic dynamic macroeconomics from a Keynesian perspective It shows that including Keynesian features in intertemporal models considerably contributes to resolve major puzzles arising in the context of the Dynamic General Equilibrium DGE model It also demonstrates that including microeconomic intertemporal behavior of economic agents in macroeconomics is not inconsistent with Keynesian economics

A Brief History of Economic Thought Bougrine, Hassan, Rochon, Louis-Philippe, 2022-07-22 It is now widely acknowledged that history is useful even essential because it helps us predict the future The history of ideas in economics as in other fields of inquiry plays an important role in enlightening current researchers as they endeavour to understand contemporary events and anticipate the future of human societies This book brings together a fine collection of chapters that span contributions from forgotten classics to the most recent new thinking about critical issues such as growth wealth its creation and its distribution among members of society It is A Brief History of Economic Thought but it will certainly go a long way in helping undergraduate students and other researchers who are curious about the evolution of economic ideas over the last five centuries

Inside a Modern Macroeconometric Model Alan A. Powell, Christopher W. Murphy, 2012-12-06 As Ken Wallis has pointed out all macroeconomic forecasters and policy analysts use economic models That is they have a way of going from assumptions about macroeconomic policy and the international environment to a prediction of the likely future state of the economy Some people do this in their heads Increasingly though forecasting and policy analysis is based on a formal explicit model represented by a set of mathematical equations and solved by computer This provides a framework for handling in a consistent and systematic manner the ever increasing amounts of relevant information Macroeconometric modelling though is an inexact science A manageable model must focus only on the major driving forces in a complex economy made up of millions of households and firms International economic agencies such as the IMF and OECD and most treasuries and central banks in western countries use macroeconometric models in their forecasting and policy analysis Models are also used for teaching and research in universities as well as for commercial forecasting in the private sector

Rational Expectations in Macroeconomic Models P. Fisher, 2013-04-17 It is commonly believed that macroeconomic models are not useful for policy analysis because they do not take proper account of agents expectations Over the last decade mainstream macroeconomic models in the UK and elsewhere have taken on board the Rational Expectations Revolution by explicitly incorporating expectations of the future In principle one can perform the same technical exercises on a forward expectations model as on a conventional model and more Rational Expectations in Macroeconomic Models deals with the numerical methods necessary to carry out policy analysis and forecasting with these models These methods are often passed on by word of mouth or confined to obscure journals Rational Expectations in Macroeconomic Models brings them together with applications which are interesting in their own right There is no comparable textbook in the literature The specific subjects include i solving for

model consistent expectations ii the choice of terminal condition and time horizon iii experimental design i e the effect of temporary vs permanent anticipated vs unanticipated shocks deterministic vs stochastic dynamic vs static simulation iv the role of exchange rate v optimal control and inflation output tradeoffs The models used are those of the Liverpool Research Group in Macroeconomics the London Business School and the National Institute of Economic and Social Research
