Making Sense Of Construction Improvement:

Making Sense of Construction Improvement Stuart D. Green, 2011-04-08 The book sets out deliberately to challenge the current construction improvement debate and the way in which it is conducted It confronts the supposedly neutral nature of construction best practice and demonstrates that the advocated recipes seldom stand up to critical scrutiny It further argues that commonly accepted components of best practice such as lean construction partnering and collaborative working rarely live up to the claims made on their behalf Such recipes invariably suffer from definitional vagueness and are constantly reinterpreted to suit the needs of different audiences Making Sense of Construction Improvement argues that construction sector improvement techniques cannot be understood in terms of their substantive content and are best understood in terms of the rhetoric within which they are presented The author also contends that the persuasiveness of such recipes depends upon the extent to which practitioners can adopt them for the purposes of making sense of the changes they observe happening around them To be accepted as best practice construction improvement techniques must also resonate with broader agendas of socio technological change The author charts how the best practice debate has developed from the aftermath of the Second World War through to the election of David Cameron's coalition government in 2010 Attention is given to the way in which the improvement debate throughout the 1960s and 70s was shaped by the broader aspirations of the post war social consensus and the associated desire for a centrally planned economy Attention thereafter is given to the way the construction sector was radically re shaped by the advent of the enterprise culture The privatisation of the sector's client base coupled with the withdrawal of the state as a provider of mass housing caused a significant and long lasting shift in the construction landscape Private sector clients similarly experienced extensive downsizing while outsourcing their procurement capabilities Such strategies were frequently justified by mobilising the rhetoric of business process re engineering BPR Contracting firms simultaneously faced unpredictable workloads and increasing market competition In response the sector at large chose to base their competitive advantage on leanness and agility Hence the emergence of the hollowed out firm as the dominant form of organising These structural trends combined to provide the backcloth to the industry improvement agenda throughout the 1980s and 1990s Making Sense of Construction Improvement argues that the popularity of improvement recipes such as partnering collaborative working and integrated teams can be understood as strategies for overcoming the loss of control associated with downsizing and outsourcing In contrast to other textbooks Making Sense of Construction Improvement does not offer advice on how to manage construction projects more effectively the aim is rather to understand the forces which have shaped the construction sector improvement agenda over time

Making Sense of Construction Improvement Stuart Green, 2023-12-15 Making Sense of Construction Improvement provides a critical evaluation of the construction improvement debate from the end of the Second World War through to the modern era The book offers unique insights into the way the UK construction sector is continuously shaped and re shaped in

accordance with changes in the prevailing political economy This second edition brings the book up to date by including coverage of key trends from 2010 2023 The book has been substantially revised and reworked to include new material relating to the age of austerity and the subsequent period of political uncertainty initiated by the Brexit referendum Changes in the political economy are positioned alongside the rise of the sustainability agenda and the advent of zero carbon Particular attention is paid to the ongoing skills crisis and the over hyped advocacy of modern methods of construction MMC as the latest supposed panacea of industry improvement Coverage includes the Farmer 2016 report Modernise or Die and the Construction Playbook HM Government 2020 However perhaps the most important addition is a focus on the Grenfell Disaster 2017 and the subsequent revelations from the public enquiry Further intermediate milestones include Building a Safer Future Hackitt 2018 and the Construction Sector Deal HM Government 2018 The emerging consensus points towards a systemic failure involving not only the construction sector but also the entire system of regulation and compliance Tracing the failings back over time and scrutinising the role played by previous generations of policymakers Stuart Green ultimately argues that Grenfell was a disaster entirely foretold The insightful and critical analysis of the industry contained within these pages is essential and timely reading for anyone who wants to understand how the construction sector arrived at where it is today and with that knowledge give further thought to where it might go next

Construction Innovation Finn Orstavik, Andrew R. J. Dainty, Carl Abbott, 2015-04-20 Construction innovation is an important but contested concept both in industry practice and academic reflection and research A fundamental reason for this is the nature of the construction industry itself the industry and the value creation activities taking place there are multi disciplinary heterogeneous distributed and often fragmented This book takes a new approach to construction innovation revealing different perspectives set in a broader context It coalesces multiple theoretical and practice based views in order to stimulate reflection and to prepare the ground for further synthesis By being clear cogent and unambiguous on the most basic definitions it can mobilise a plurality of perspectives on innovation to promote fresh thinking on how it can be studied enabled measured and propagated across the industry This book does not gloss over the real life complexity of construction innovation Instead its authors look explicitly at the challenges that conceptual issues entail and by making their own position clear they open up fresh intellectual space for reflection Construction Innovation examines innovation from different positions and through different conceptual lenses to reveal the richness that the theoretical perspectives offer to our understanding of the way that the construction sector actors innovate at both project and organizational levels The editors have brought together here leading scholars to deconstruct the concept of innovation and to discuss the merits of different perspectives their commonalities and their diversity The result is an invaluable sourcebook for those studying and leading innovation in the design the building and the maintenance of our built environment

Risk Pricing Strategies for Public-Private Partnership Projects Abdelhalim Boussabaine, 2013-10-10 Risk Pricing Strategies for Public Private Partnership Projects Innovation in the

Built Environment The complexity of public private partnership PPP project procurement requires an effective process for pricing managing and appropriate allocation of risks The level at which risk is priced and the magnitude of risks transferred to the private sector will have a significant impact on the cost of the PPP deals as well as on the value for money analysis and on the selection of the optimum investment options The construction industry tends to concentrate on the effectiveness of risk management strategies and to some extent ignores the price of risk and its impact on whole life cost of building assets There is a pressing need for a universal framework for the determination of fair value of risks throughout the PPP procurement processes Risk Pricing Strategies for Public Private Partnership Projects addresses the issues of risk pricing and demonstrates the use of a coherent strategy to arrive at a fair risk price The focus of the book is on providing risk pricing strategies to maximise return on risk retention and allocation in the procurement of PPP projects With its up to date coverage of the latest developments in risk pricing and comprehensive treatment of the methodologies involved in designing and building risk pricing strategies the book offers a simple model for pricing risks The book follows a thematic structure PPP processes map risk uncertainty and bias risk pricing management strategies risk pricing measurement and modelling risk pricing at each of the project life cycle stages and deals with all the important risk pricing issues using relevant real world situations through case study examples It explains how the theory and strategies of risk pricing can be successfully applied to real PPP projects and reflects the broad understanding required by today s project risk analysts in their new and important role in PPP contract management Also in the IBE series Managing Change in Construction Projects Senaratne Sexton 978 14443 3515 6 Innovation in Small Professional Practices in the Built Environment Lu Sexton 978 14051 9140 1 Other books of interest Urban Infrastructure Finance and Management Wellman Spiller 978 0 470 65635 8 Project Finance for Construction and Infrastructure Pretorius Chung Hsu McInnes Lejot Arner Construction Supply Chain Management Pryke 978 14051 5844 2 Policy Finance Management for Public Private Partnerships Edited by Akintoye Beck 978 14051 7791 7 Strategic Issues in Public Private Partnerships 2nd Edition Dewulf Blanken Bult Spiering 978 0 470 65635 8 *Describing Construction* Rick Best, Jim Meikle, 2022-09-16 This third book from editors Rick Best and Jim Meikle brings together and presents insights into a number of key concepts in the study of construction firms projects and the group of activities that loosely define the construction industry The value for readers comes from the collection of a variety of topics in a single volume which provide a basic understanding of the complexities of construction as more than a set of practical concerns such as labour management and materials handling Instead the focus is on analysis of the industry and its component parts from the viewpoints of construction economists and others seeking to understand the drivers and challenges that shape an area of economic activity that is a major contributor in all economies The aim of this book is to provide an overview and discussion of several aspects of what makes construction tick It is unlike other industry sectors in many ways being project based with often intense competition for work Where the first book *Measuring Construction* focused on particular areas associated with

quantifying various aspects of construction activity and the second Accounting for Construction looked more at how we record and report on construction activity Describing Construction gives readers the views of experts in the field of how the construction industry is described what its make up is it even asks the question is construction a single industry This book will change the way most readers understand the construction industry whatever that may be not from the point of view of visible on site activities but through a scientific approach to analysis and understanding of how projects firms and various sectors of the industry work and how things are changing and may continue to change in future It is essential reading for students and researchers in construction management quantity surveying architecture and engineering
