Manufacturing Facilities Dileep R. Sule, 2008-12-22 Fierce global competition in manufacturing has made proficient facilities planning a mandatory issue in industrial engineering and technology. From plant layout and materials handling to quality function deployment and design considerations, *Manufacturing Facilities Location Planning and Design Third Edition* covers a wide range of topics crucial to manufacturing success. *Manufacturing facilities*, *Manufacturing Facilities* Dileep R. Sule, 2009

Logistics Systems: Design and Optimization Andre Langevin, Diane Riopel, 2005-03-25 In a context of global competition, the optimization of logistics systems is inescapable. *Logistics Systems Design and Optimization* falls within this perspective and presents twelve chapters that well illustrate the variety and the complexity of logistics activities. Each chapter is written by recognized researchers who have been commissioned to survey a specific topic or emerging area of logistics. The first chapter by Riopel, Langevin, and Campbell develops a framework for the entire book. It classifies logistics decisions and highlights the relevant linkages to logistics decisions. The intricacy of these linkages demonstrates how thoroughly the decisions are interrelated and underscores the complexity of managing logistics activities. Each of the chapters focuses on quantitative methods for the design and optimization of logistics systems. **Sustainable Reverse Logistics Network** Daoud Aït-Kadi, Marc Chouinard, Suzanne Marcotte, Diane Riopel, 2012-12-13 Traditional logistical chains have enabled us to respond efficiently to the needs of customers in terms of services and products. However, the returns from these activities have been eliminated or ignored. Reverse logistics aims at valuing these products using a value creation network integrating recovery, processing, recycling, distribution, or clean removal processes. In the context of sustainable development, integrating economic, social, and environmental factors, these activities raise questions concerning the design of products, processes, and logistic networks. Taking these considerations into account involves significant changes that affect business models as well as consumer habits. New working methods and a long-term vision are the new bases for sustainable logistic networks. The objective of this book is to supply an educational tool for engineering schools as well as a management tool for the efficient implementation of the reverse logistics function. It brings together the knowledge acquired by the scientific community. Even if reverse logistics has been the subject of several books over the past few years, very few theories have been developed and the subject is far from being exhausted. This book proposes generic concepts and processes that can be adapted to all businesses producing goods and services and which aim to integrate reverse logistics. These processes will enable us to shed light on their complexity and to take into account all the important variables. *A Finite Element Method Primer for Mechanical Design* Charles E. Knight, 1994 **Facilities Design** Sunderesh S. Heragu, 2008-06-19 Delineating the proper design layout and location of facilities, this book strikes a healthy balance between theory and practice. It provides an understanding of the practical aspects of implementing preliminary designs, development through analytical models. The third edition of a bestseller, it features updated multimedia tools, new

Manufacturing: Engineering, Management and Marketing M. T. Lilly, 2015-09-09 In a developing country like Nigeria the available land is plentiful but is relatively more expensive in city areas like Abuja Lagos and Port Harcourt Hence to reduce cost land outside the cities is often sought In Nigeria labor is cheap per hour but it becomes more expensive as one moves toward the cities Nevertheless to reduce overall costs transportation costs should be reduced so the site of the factory should be close to a large market for its products In developed countries government policies influence significantly the locations of factories For instance factories are set up in high unemployment areas to comply with the national development policy for the country In Nigeria the sitting of a factory is often based on political rather than management considerations Therefore many government owned companies exist in economically nonviable locations for example the refinery and the fertilizer plant at Kaduna However private investors prefer to start companies in their own localities Reliable electricity supplies and an adequate transportation infrastructure are essential for most companies Unfortunately in Nigeria companies too often have to provide standby generators thereby increasing production costs This is one of the reasons why made in Nigeria goods tend to be more expensive than the corresponding imported ones despite far lower local labor costs This textbook which provides desirable service to students engineers managers and politicians covers an extensive range of topics that includes but not limited to essentials of management optimal maintenance of equipment financial management cost benefit analysis creative thinking entrepreneurship operation research queuing theory the factory environment depreciation replacement theory marketing automation and motivation
