

POGIL: Mass Extinctions

What is the biological significance of mass extinction?

Why? Evidence suggests that five mass extinctions have occurred throughout the history of the Earth—the most famous of which led to the extinction of the dinosaurs. Scientists are still studying the causes of these catastrophic events. What can we learn from mass extinctions, and what is their impact on the diversity of life forms found on Earth?

Model 1 – Extinction Over Time

- What are the names of the three eras identified on the x-axis in Model 1?
The eras are named the **Paleozoic**, **Mesozoic**, and the **Cenozoic**.
- To what does the y-axis on the graph in Model 1 refer? (Include the unit of this variable.)
The y-axis refers to **total extinction rates (families per million years)**.
- According to Model 1, approximately how long did each of these eras last?
 - Paleozoic It lasted roughly 291 million years.**
 - Mesozoic It lasted roughly 185.5 million years.**
 - Cenozoic It lasted roughly 65.5 million years.**
- Circle the five major mass extinctions on the graph in Model 1.
Look on the graph.
- List the period in which each mass extinction begins and ends.
 - Mass Extinction 1 begins in **O** and ends in **S**.
 - Mass Extinction 2 begins in **D** and ends in **C**.
 - Mass Extinction 3 begins in **P** and ends in **Tr**.
 - Mass Extinction 4 begins in **Tr** and ends in **J**.
 - Mass Extinction 5 begins in **C** and ends in **P**.

The Sixth Extinction: by Elizabeth Kolbert | Key Takeaways, Analysis & Review Instaread, 2015-09-15 The Sixth Extinction by Elizabeth Kolbert Key Takeaways Analysis Review Preview The Sixth Extinction is a book by award winning journalist Elizabeth Kolbert In this book the author demonstrates that species are dying out at a rate comparable to the previous mass extinctions and if the trend of global warming deforestation and pollution continues in its present course the numbers of extinct species will meet or exceed that rate of destruction This event will include the extinction of humanity What this means is that the current loss of life today will soon justify the term The Sixth Extinction a mass extinction like the one that destroyed the dinosaurs 65 million years ago When humans originated about 100 000 years ago they began to hunt some species into extinction Their ability to outcompete other early hominids for food led to the extinction of those species including Neanderthals The extinction of species picked up steam when humans began transforming great swaths of forest and plains into farmland about 10 000 years ago PLEASE NOTE This is key takeaways and analysis of the book and NOT the original book Inside this Instaread of The Sixth Extinction Overview of the book Important People Key Takeaways Analysis of Key Takeaways

Catastrophes and Lesser Calamities Anthony Hallam, 2004 Uses the geological record to trace historical and modern views on five mass extinction events including the disappearance of dinosaurs

Extinctions in the History of Life Paul D. Taylor, 2004-11-11 Extinction is the ultimate fate of all biological species over 99 percent of the species that have ever inhabited the Earth are now extinct The long fossil record of life provides scientists with crucial information about when species became extinct which species were most vulnerable to extinction and what processes may have brought about extinctions in the geological past Key aspects of extinctions in the history of life are here reviewed by six leading palaeontologists providing a source text for geology and biology undergraduates as well as more advanced scholars Topical issues such as the causes of mass extinctions and how animal and plant life has recovered from these cataclysmic events that have shaped biological evolution are dealt with This helps us to view the biodiversity crisis in a broader context and shows how large scale extinctions have had profound and long lasting effects on the Earth's biosphere

Mass Extinctions and Their Aftermath, 1997-09-11 Why do mass extinctions occur The demise of the dinosaurs has been discussed exhaustively but has never been put into the context of other extinction events This is the first systematic review of the mass extinctions of all organisms plant and animal terrestrial and marine that have occurred in the history of life This includes the major crisis 250 million years ago which nearly wiped out all life on Earth By examining current paleontological geological and sedimentological evidence of environmental changes the cases for explanations based on climate change marine regressions asteroid or comet impact anoxia and volcanic eruptions are all critically evaluated

The Mass-Extinction Debates William Glen, 1994 This book examines the arguments and behavior of the scientists who have been locked in conflict over two competing theories to explain why 65 million years ago most life on earth including the dinosaurs perished

Extinction Michael Charles Boulter, 2002 Mikhail Gorbachev and Zdenek Mlynar were friends for half a century since they first crossed paths as students in 1950 Although one was a Russian and the other a Czech they were both ardent supporters of communism and socialism One took part in laying the groundwork for and carrying out the Prague spring the other opened a new political era in Soviet world politics In 1993 they decided that their conversations might be of interest to others and so they began to tape record them This book is the product of that thinking out loud process It is an absorbing record of two friends trying to explain to one another their views on the problems and events that determined their destinies From reminiscences of their starry eyed university days to reflections on the use of force to save socialism to contemplation of the end of the cold war here is a far more candid picture of Gorbachev than we have ever seen before Volcanism, Impacts, and Mass Extinctions: Causes and Effects Gerta Keller, Andrew C. Kerr, 2014-09-16 Comprises articles stemming from the March 2013 international conference at London's Natural History Museum Researchers across geological geophysical and biological disciplines present key results from research concerning the causes of mass extinction events

Lost Creatures of the Earth Jon Erickson, 2014-05-14 Presents an examination of possible phenomena that caused dramatic changes in the earth's surface that could explain periodic mass extinctions and the evolution of new species

Mass Extinctions and Their Aftermath Anthony Hallam, P. B. Wignall, 1997 Complements the many popular and often sensational accounts multi author volumes and studies on a particular mass extinction with a focuses scientific investigation of all the known mass extinctions with sufficient technical detail to excite geologists and paleontologists Discusses the Big Five one late in each of the Ordovician Devonian Permian Triassic and the famous Cretaceous that saw the end of the Dinosaurs and minor mass extinctions from the early Cambrian the Cenozoic Also examines the current paleontological geological and sedimentological evidence of environmental change and sets out the cases for causes by climate change marine regressions asteroid or comet impact anoxia and volcanic eruptions Annotation copyrighted by Book News Inc Portland OR

The End of Evolution Peter Douglas Ward, 1995 A finalist for a Los Angeles Times book award this contagiously enthusiastic book eloquently recreates the dramatic history of life and its great extinctions and issues an unprecedentedly compelling call to act to preserve our planet's biodiversity Line art photos *Vanishing Life* Jeff Hecht, 2009-02-06 From the author of *Optics and Shifting Shores* comes a detailed and mesmerizing look into the mystery of mass extinctions *Vanishing Life* takes readers into the fascinating phenomenon of mass extinction as Jeff Hecht bust myths with shocking facts in this spellbinding book In clear and lucid style Hecht explores the geological evidence of extinction and its interpretation the evolution of species fossilization and the theories by which science attempts to explain various dyings

Mass Extinctions Stephen K. Donovan, S. K. Donovan, 1989 Catastrophes and Lesser Calamities Tony Hallam, 2005-07-14 This is a book about the dramatic periods in the Earth's history called mass extinctions short periods by geological standards when life nearly died out on Earth The most famous is the mass extinction that happened about 65

million years ago and that caused the death of the dinosaurs But that was not the worst mass extinction that honour goes to the extinction at the end of the Permian Period about 250 million years ago when over 90% of life is thought to have become extinct What caused these catastrophes Was it the effects of a massive meteorite impact There is evidence for such an impact about 65 million years ago Or was it a period of massive volcanic activity There is evidence in the rocks of huge lava flows at periods that match several of the mass extinctions Was it something to do with climate change and sea level Or was it a combination of some or all of these The question has been haunting geologists for a number of years and it forms one of the most exciting areas of research in geology today In this book Tony Hallam a distinguished geologist and writer looks at all the different theories and also what the study of mass extinctions might tell us about the future If climate change is a key factor we may well as some scientists have suggested be in a period of mass extinction of our own making

Mass Extinctions, Volcanism, and Impacts Thierry Adatte, David P.G. Bond, Gerta Keller, 2020-04-13 This volume covers new developments and research on mass extinctions volcanism and impacts It addresses the following topics the Central Iapetus magmatic province thermogenic degassing in large igneous provinces global mercury enrichment in Valanginian sediments Guerrero Morelos carbonate platform response to the Caribbean Colombian Cretaceous large igneous province implications for the Cretaceous Paleocene boundary event in shallow platform environments and correlation to the deep sea environmental effects of Deccan volcanism on biotic transformations and attendant Cretaceous Paleogene boundary mass extinction in the Indian subcontinent Deccan red boles and factors leading to the collapse of producers during the Chicxulub impact and Deccan Traps eruptions

Rivers in Time Peter Douglas Ward, 2000 Elaborating on and updating Ward's previous work *The End of Evolution* *Rivers in Time* delves into his newest discoveries The book presents the gripping tale of the author's investigations into the history of life and death on Earth through a series of expeditions that have brought him ever closer to the truth about mass extinctions past and future

Mass-Extinction Debates William Glen, 1994-11-01 The history of life on Earth is punctuated by half a dozen puzzling mass extinctions that constitute the benchmarks of the geologic time scale These great breaks in the continuity of the fossil record have invited a wide array of scientific speculation The most thoroughly studied of the mass extinctions occurred 65 million years ago when most life on Earth incl the dinosaurs perished Two rival hypotheses have emerged to account for this catastrophic event the impactor hypothesis sees the earth bombarded with deadly meteorites while the competing volcanist hypothesis evokes gigantic volcanic eruptions This book examines the arguments and behavior of the scientists who have been locked in conflict over the competing hypotheses

Extinction Events in Earth History IGCP Project 216--"Global Biological Events in Earth History.", 1990 This volume is dedicated to the interdisciplinary study of dynamic biological changes through the Phanerozoic which are associated with mass extinction events and similar biotic crises and their causal mechanisms In particular it documents in detail the complex nature of terrestrial and extraterrestrial feedback loops that are associated with many mass extinction intervals Authors have

been asked to represent most of the known mass extinction events through time and to comment on the complex earthbound or extraterrestrial causes or both for global biotic crises The reader is offered new perspectives of extinction boundaries a more innovative and diverse approach to causal mechanisms and mass extinction theory blended views of paleobiologists oceanographers geochemists volcanologists and sedimentologists by an international cast of authors No other book on extinction presents such a broad spectrum of data and theories on the subject of mass extinction *The Call of Distant Mammoths* Peter D. Ward, 1998-10-09 To help us understand what happened during the Ice Age Peter Ward takes us on a tour of other mass extinctions through earth's history He presents a compelling account of the great comet crash that killed off the dinosaurs and describes other extinctions that were even more extensive In so doing he introduces us to a profound paradigm shift now taking place in paleontology rather than arising from the gradual workings of everyday forces all mass extinctions are due to unique catastrophic events Written with an irresistible combination of passion and expertise *The Call of Distant Mammoths* is an engaging exploration of the history of life and the importance of humanity as an evolutionary force Carefully argued an intelligent and compelling book THE OLYMPIAN SEATTLE WASHINGTON Ward deftly summarizes a large body of scientific literature simplifying complex ideas for the general reader without condescension PUBLISHERS WEEKLY Did the overkill really happen Peter Ward deftly summarizes the arguments Ward tells the story well THE NEW SCIENTIST **Earth's Mass Extinctions** Brook Clearwater, AI, 2025-02-17 *Earth's Mass Extinctions* explores the cataclysmic events that have punctuated our planet's history threatening all life The book investigates the Big Five extinction events delving into their causes consequences and the subsequent rebound of life By examining the fossil record and geological history it uncovers patterns in environmental change that drove these crises One intriguing insight is how certain species survived offering clues to resilience in the face of global upheaval The book emphasizes that understanding these past events is crucial for addressing the modern biodiversity crisis The book takes an analytical approach presenting complex earth sciences information in an accessible manner It highlights the interplay between geological processes such as volcanism and asteroid impacts and biological systems The book also emphasizes the importance of understanding the selectivity of past extinction events providing a framework for assessing the vulnerability of modern ecosystems Each of the Big Five extinctions from the Ordovician Silurian to the Cretaceous Paleogene are presented as case studies exploring specific causes patterns and the recovery of life that followed The book progresses from introducing the concept of mass extinctions and the geological timescale to detailed case studies and concludes by synthesizing lessons for conservation and environmental policy By studying these past extinction events readers gain invaluable insights into the processes that drive both the loss and recovery of biodiversity informing strategies to help mitigate the current biodiversity crisis and understand the long term sustainability of human activities Dying Planet Jon Erickson, 1991 What we need to know on a personal and societal level to reverse current trends for our planet
