Dynamic Macroeconomics George Alogoskoufis, 2019-12-17 An advanced treatment of modern macroeconomics presented through a sequence of dynamic equilibrium models with discussion of the implications for monetary and fiscal policy This textbook offers an advanced treatment of modern macroeconomics presented through a sequence of dynamic general equilibrium models based on intertemporal optimization on the part of economic agents The book treats macroeconomics as applied and

policy oriented general equilibrium analysis examining a number of models each of which is suitable for investigating specific issues but may be unsuitable for others After presenting a brief survey of the evolution of macroeconomics and the key facts about long run economic growth and aggregate fluctuations the book introduces the main elements of the intertemporal approach through a series of two period competitive general equilibrium models the simplest possible intertemporal models This sets the stage for the remainder of the book which presents models of economic growth aggregate fluctuations and monetary and fiscal policy The text focuses on a full analysis of a limited number of key intertemporal models which are stripped down to essentials so that students can focus on the dynamic properties of the models Exercises encourage students to try their hands at solving versions of the dynamic models that define modern macroeconomics Appendixes review the main mathematical techniques needed to analyze optimizing dynamic macroeconomic models The book is suitable for advanced undergraduate and graduate students who have some knowledge of economic theory and mathematics for economists

Introduction to Behavioral Economics David R. Just, 2013-11-21 Introduction to Behavioral Economics is focused on the broad principles of behavior which are illustrated using real world examples from experimental literature as well as experiential examples Real world examples are drawn from news items historical accounts and the economics literature Experimental examples are drawn from the economics literature These examples are discussed providing explanatory figures and interpretations With the rise of both behavioral finance and behavioral industrial organization undergraduates now clamor for formal training and instruction in behavioral economics Introduction to Behavioral Economics covers all the ways consumers and other economic agents behave in nonrational manner and prepares readers to make rational economic choices This text provides experiments as a set of examples of the broader principles of behavior Foundations of Dynamic Economic Analysis Michael R. Caputo, 2005-01-10 Foundations of Dynamic Economic Analysis presents a modern and thorough exposition of the fundamental mathematical formalism used to study optimal control theory i.e. continuous time dynamic economic processes and to interpret dynamic economic behavior The style of presentation with its continual emphasis on the economic interpretation of mathematics and models distinguishes it from several other excellent texts on the subject This approach is aided dramatically by introducing the dynamic envelope theorem and the method of comparative dynamics early in the exposition Accordingly motivated and economically revealing proofs of the transversality conditions come about by use of the dynamic envelope theorem Furthermore such sequencing of the material naturally leads to the development of the primal dual method of comparative dynamics and dynamic duality theory two modern approaches used to tease out the empirical content of optimal control models The stylistic approach ultimately draws attention to the empirical richness of optimal control theory a feature missing in virtually all other textbooks of this type *Linear Algebra with Applications* Otto Bretscher, 1997 Linear transformations and mappings are a running theme in this text Geometric explication and history are heavily integrated After the introduction of eigenvalues dynamical systems becomes a running sub
