Building Construction and Superintendence, Vol. 2 (Classic Reprint) Frank E. Kidder,2015-06-30 Excerpt from Building Construction and Superintendence Vol 2 The successful practice of Architecture requires not only ability to draw and design but also a thorough knowledge of building construction in all its branches at least so far as to know how the work should be done and conscientious and painstaking supervision of the work Without a knowledge of the best methods of performing building operations and of the materials that should be used it is impossible for the architect to prepare his specifications intelligently and so as to secure the kind of work he wishes done and upon the thoroughness with which the specifications are prepared depends in a great measure the satisfactory execution of the work The position occupied by the architect as a judge or referee between the owner and contractor also makes it necessary that he should be able to show such thorough familiarity with common practice as will command the respect of both Workmen soon discover whether the superintendent is familiar with the difference between good and bad work and if they find him wanting they are quite sure to take advantage of his lack of knowledge After the plans and specifications have been prepared with the utmost care accidents failures and bad work are quite sure to occur unless the building operations are carefully and intelligently supervised In fact probably more failures in buildings occur from the use of poor materials and bad workmanship than from faults in the plans While it is impossible for one to acquire a thorough knowledge of building construction from books alone it is necessary for the young architect especially to depend upon technical books to a large extent for his knowledge of how work should be done and of what materials are best suited for certain purposes and how they should be used As a substitute for his lack of knowledge he must rely largely upon knowledge gained through the experience of others oftentimes at great cost In these books the author has endeavored to describe all the ordinary building operations in such a way that they may be easily understood and to point out the defects often met with in building materials and construction and to indicate in a measure how they may be avoided To get along well with contractors and workmen the architect must feel sure that his

opinions and decisions are correct and stick to them Of course one can often learn much from practical builders but unless he is already somewhat informed upon the subject he is often likely to be imposed upon About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works **Building**
