This book gathers selected high quality research papers presented at the Eighth International Congress on Information and Communication Technology held at Brunel University London on 20-23 February 2023. It discusses emerging topics pertaining to information and communication technology (ICT) for managerial applications, e-governance, e-agriculture, e-education and computing technologies, the Internet of Things (IoT) and e-mining. Written by respected experts and researchers working on ICT, the book offers a valuable asset for young researchers involved in advanced studies. The work is presented in four volumes.

Technologies for Sustainable Development Alka Mahajan, Parul Patel, Priyanka Sharma, 2022-02-14. This volume contains a selection of papers presented at the 7th Nirma University International Conference on Engineering NUiCONE 2019. This conference followed the successful organization of four national conferences and six international conferences in previous years. The main theme of the conference was Technologies for Sustainable Development, which is in line with the SUSTAINABLE DEVELOPMENT GOAL established by the United Nations. The conference was organized with many interdisciplinary technical themes encompassing a broad range of disciplines and enabling researchers, academicians and practitioners to choose between ideas and themes. Besides NUiCONE 2019, has also presented an exciting new set of events to engage practicing engineers, technologists and technopreneurs from industry through special knowledge sharing sessions involving applied technical papers based on case study applications, white papers, panel discussions, innovations and technology products. This proceedings will definitely provide a platform to proliferate new findings among researchers.

Neuroendocrine Clocks and Calendars Francis J. P. Ebling, Hugh D. Piggins, 2021-01-04. This book explores how daily and seasonal rhythmicity is generated, how these rhythms are synchronised by our environment and how they regulate the neuroendocrine systems that impact our physiology and behaviour. The constraints of surviving in a seasonal environment have shaped human evolution and migration have shaped our societies and cultures and continue to influence our everyday lives, health and wellbeing. Identifying the mechanisms whereby seasonal rhythmicity is generated and regulates the brain and body is not only important for understanding the natural world and relevant to animal production, it also offers many insights into the human condition. Each chapter is written by an international expert in the field of chronobiology. A historical perspective on how research into photoperiodism and rhythmicity progressed is initially provided, but the main focus of this book is on the remarkable studies in the last few

decades that have unravelled the molecular and cellular machinery underpinning circadian and circannual timing Topics covered include the role of melatonin in communicating seasonal information to the brain and pituitary gland the neuroanatomical pathways in mammals birds and fish by which changes in photoperiod reach the hypothalamus the role of glial cells tanyocytes and thyroid hormone in seasonal rhythmicity neuroplasticity across seasons effects of changing day length on mood regulation of clock gene expression and the role of the suprachiasmatic nucleus This book will appeal to all students and researchers who wish to learn about current and past research on daily and seasonal rhythmicity This is the tenth volume in the International Neuroendocrine Federation INF Masterclass in Neuroendocrinology series Volumes 1 7 published by Wiley that aims to illustrate highest standards and encourage the use of the latest technologies in basic and clinical research and hopes to provide inspiration for further exploration into the exciting field of neuroendocrinology
