Bairn - CBSE - Solutions of RD Sharma - Mathematics - Class 10 : For 2021 Exam I.S. Chawla, This book is the solution of Mathematics R D Sharma class 10th Publisher Dhanpat Rai It includes solved additional questions of all the chapters mentioned in the textbook and this edition is for 2021 Examinations Recommended for only CBSE students

Research in Progress , 1971 Theorie des Integrallogarithmus und verwandter Transzendenten Niels Nielsen, 1906 **Fractional Programming** I.M. Stancu-Minasian, 2012-12-06

Mathematical programming has known a spectacular diversification in the last few decades. This process has happened both at the level of mathematical research and at the level of the applications generated by the solution methods that were created. To write a monograph dedicated to a certain domain of mathematical programming is under such circumstances especially difficult. In the present monograph we opt for the domain of fractional programming. Interest in this subject was generated by the fact that various optimization problems from engineering and economics consider the minimization of a ratio between physical and/or economical functions, for example cost/time, cost/volume, cost/profit, or other quantities that measure the efficiency of a system. For example, the productivity of industrial systems, defined as the ratio between the realized services in a system within a given period of time and the utilized resources, is used as one of the best indicators of the quality of their operation. Such problems where the objective function appears as a ratio of functions constitute fractional programming problems. Due to its importance in modeling various decision processes in management science, operational research, and economics, and also due to its frequent appearance in other problems that are not necessarily economical, such as information theory, numerical analysis, stochastic programming, decomposition algorithms for large linear systems, etc., the fractional programming method has received particular attention in the last three decades. **J.C. Poggendorffs**
