CLINICAL CHEMISTRY

OVERVIEW OF AUTOMATED CLINICAL CHEMISTRY TESTS

Machines used in sequence:

- For routine chemistry tests:
 - Siemens Dimension
 - Pentra C400
- For blood gas and electrolyte tests:
 - OPTI-CCA TS

Clinical chemistry evaluates the biochemical components of the liquid portion of the blood which is plasma/ serum. Most commonly used specimen is serum.

*What are the different tests in clinical chemistry?

- **Kidney Function Test** which include creatinine, blood urea nitrogen (BUN) and uric acid.
 - ❖ **Creatinine and BUN** measures kidney function.
 - ❖ **Creatinine** is the more specific test and is done using either enzymatic or colorimetric methods. Enzymatic is said to be the better method for the determination of any laboratory tests.
 - ❖ **Uric acid** is not really a kidney function test but it can also attest kidney function, while it's also an indicator of joint diseases especially rheumatoid, gouty arthritis and other types of arthritis.
- **Liver or Hepatic Panel** this includes ALT (SGPT), AST (SGOT), total protein, albumin, globulin, alkaline phosphatase, direct and indirect bilirubin and GGT (an indicator of alcoholic cirrhosis) while all other test will test liver function.
 - ❖ **Prothrombin time** is also part of the hepatic panel, it can assess several clotting factors and also vitamin K dependent this includes factors 2, 7, 9 and 10.
 - ❖ **Clotting factors: 2, 7, 9, and 10** - independent on prothrombin time because they are *vitamin K dependent*.
- **Thyroid Panel** this includes TSH, Free T3, Free T4, T3 and T4.
 - ❖ All of this test will attest hyperthyroidism, hypothyroidism and euthyroidism.
- **Executive Panel #3/ Cardiac Panel** it will assess cardiac enzymes like the **CKMB (creatinine-kinase-MB) and AST**.
 - ❖ The most accurate cardiac enzyme is called the **CKMB** because it is more secreted by the cardiac muscle and it is not so concentrated in the skeletal muscle.
 - ❖ The most specific protein and the most specific cardiac muscle is **Troponin**.
 - It has two types: **Troponin T and Troponin I**
 - Both are specific except the troponin I lacks periodicity compared to troponin T. **Troponin I** is more specific. Other tests in cardiac function although it is not done in the hospital includes *myoglobin* and *AST* (not anymore part of the cardiac panel).

Diagnostic Reasoning Ibrahim A. Hashim, 2025-02-01 Training in clinical chemistry is acquired via different avenues that include didactic lectures on pathophysiology of disease methodologies and practical aspects of testing and through attendance of operations meetings sign out sessions seminars and tutorials There is little instruction on how to apply the vast amount of knowledge gained in the process to practice In other branches of medicine cases are regularly presented with clinical information and therapeutic interventions which form the basis of training Diagnostic Reasoning Laboratory Based Case Studies in Clinical Chemistry fills this gap for clinical chemistry The concise and practical approach of the book including real life scenarios is an excellent resource for pathology trainees clinical laboratory science students clinical chemistry fellows clinical laboratory professionals and clinicians These cases help professionals remain competent in the field and be successful in their board exams The cases are stated as they present often with no or few clinical details accompanying the sample request with only barcoded samples arriving into the laboratory In a busy laboratory thousands of these cases are received daily and it is impossible to review the clinical information associated with the specimens There are no books with a similar approach and emphasis Fills the gap in teaching by addressing the subject from a laboratory practical prospective with concomitant application of evidence based laboratory investigation Presents laboratory data in tabulated format to resemble real life scenarios shows list of abbreviations and conversion factors Cases begin with clinical presentation and information not available to those within the clinical laboratory Discusses the differential diagnosis and suggests additional testing or investigations as necessary *Clinical Chemistry* David N. Bailey, Robert L. Fitzgerald, 2024-12-12 This book is a toolkit for teaching a course on the pathophysiology of disease and how the most widely utilized laboratory tests can be used to diagnose these conditions Tests for the major common diseases are presented by organ system It is also a study guide for students and trainees as they prepare for their respective board examinations Each topic includes succinct text focusing on a disease topic along with a set of PowerPoint lecture slides and clinical cases with answers The toolkit also contains instructions for preparing the teaching laboratories for the course a comprehensive list of differential diagnoses for the most frequent clinical chemistry abnormalities discussion of selected cases taken by pathology residents while on night call and quiz questions with answers Analytical methodology is not presented unless it is important in understanding the test This third edition includes updated material on tumor markers Alzheimer s disease markers markers for pre eclampsia additional drugs for which therapeutic monitoring is available and biomarkers for ethanol abuse among others The comprehensive toolkit is the result of more than 40 years of teaching an introductory course in clinical chemistry to second year medical students at the University of California San Diego Elements of this book have also been used in teaching UC San Diego clinical laboratory scientist training program students pharmacy students clinical chemistry postdoctoral fellows and pathology residents This work has been previously published in two editions 2017 and 2021 by the
