Capra,Barbara C. Clemmensen,William Lavalee,John R. Schiffer,CENTER FOR NAVAL ANALYSES ARLINGTON VA INST OF NAVAL STUDIES.,1975 This study reviews three problem areas of aircraft engine maintenance in the Navy the setting of maximum operating time the performance of overhauls for cause instead of repairs and the site of engine repair All of the problem areas affect in some way the number of engine overhauls performed annually The study assesses the effectiveness of engine overhaul from a safety and reliability standpoint by analyzing Navy data on engine related aircraft mishaps and engine removals The analysis revealed that within the current range of operations engines wear in but under current policies of continued repair replacement and relatively short times between overhauls engines as a system do not wear out Consequently policies which would decrease the number of overhauls performed annually and increase the time between overhauls appear to be reasonable from a reliability and safety standpoint Using a model of the engine repair and overhaul pipeline the study finds that three new policies two of which would increase the time between overhauls result in lower annual maintenance costs and improved spare engine availability Author **Aircraft Engine Maintenance** Philip MacBain,Ralph B. Since this inaugural first DET conference, the DET conference series has been successfully held in 2004 at Seattle, Washington, USA; in 2006 at Setúbal, Portugal; in 2007 at Bath, England; and in 2008 at Nantes, France. The DET2009 conference continues to bring together international expertise from the academic and industrial fields, pushing forward the boundaries of research, knowledge and best practice in digital enterprise technology for design and manufacturing and logistics and supply chain management. Over 120 papers from over 10 countries have been accepted for presentation at DET2009 and inclusion in this Proceedings volume after a stringent refereeing process. On behalf of the organizing and program committees, the Editors are grateful to the many people who have made DET2009 possible: to the authors and presenters, especially the keynote speakers; to those who have diligently reviewed submissions; to members of the International Scientific Committee, Organizing Committee and Advisory Committee; and to colleagues for their hard work in sorting out all the arrangements. We would also like to extend our gratitude to DET2009 sponsors, co-organizers and supporting organizations.

Engine health monitoring (EHM) has been a very popular subject to increase aircraft availability with minimum maintenance cost. The study is aimed at providing a method to monitor the aircraft engine health during the flight with the aim of providing an opportunity for early fault detection to improve airline maintenance effectiveness and reliability. Since the impending engine failures may cause to change the engine parameters such as Fuel Flow (FF), Exhaust Gas Temperature (EGT), engine fan speed (N1), engine compressor speed (N2), etc., engine deteriorations or faults may be identified before they occur by monitoring them. So as to monitor engine health in flight, the automation of current work for EHM, which is done manually by airlines, is developed by using fuzzy logic (FL) and neural network (NN) models. FL is selected to develop an Automated EHM system (AEHMS) since it is a very useful method for automation health monitoring. The fuzzy rule inference system for different engine faults is based on the expert knowledge and real life data in Turkish Airlines fleet. The complete loop of EHM is automatically performed by visual basic programs and Fuzzy Logic Toolbox in MATLAB. Finally, the method is utilized to run for monitoring the engines in Turkish Airlines fleet. This study has shown that AEHMS can be used by airlines or engine manufacturers efficiently to simplify the EHM system and minimize the drawbacks of it, such as extra labor, human error and requirement for engineering expertise. This method may also be applicable other than aircraft engines, such as auxiliary power unit structures. Since every

engine type has different characters it is required to revise the fuzzy rules for the concerning engine types **Next**
