Rethinking Environmental Protection Phillip F. Cramer, 2000-01-01
Despite widespread popular support for environmental action Phillip F Cramer argues that current U S environmental policy approaches fail to address the real threat of environmental insecurity Cramer traces this failure to a reluctance to recognize and address the interconnectedness of natural forces just as all elements within the environment are linked so too should our perspectives on and responses to environmental degradation be linked In this book Cramer provides an innovative holistic approach to environmental protection that incorporates the best lessons learned from the fields of biology ethics philosophy political science law ecology and international relations He especially advocates local action and providing illustrative examples demonstrates how local action around the world is most effective when carried out within a global framework that supports information dissemination and international coordination This book will energize to thought and action any scholar student or general reader concerned with environmental issues and our current trajectory toward environmental decay

Understanding Racial and Ethnic Differences in Health in Late Life National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Population, Panel on Race, Ethnicity, and Health in Later Life, 2004-10-08
As the population of older Americans grows it is becoming more racially and ethnically diverse Differences in health by racial and ethnic status could be increasingly consequential for health policy and programs Such differences are not simply a matter of education or ability to pay for health care For instance Asian Americans and Hispanics appear to be in better health on a number of indicators than White Americans despite on average lower socioeconomic status The reasons are complex including possible roles for such factors as selective migration risk behaviors exposure to various stressors patient attitudes and geographic variation in health care This volume produced by a multidisciplinary panel considers such possible explanations for racial and ethnic health differentials within an integrated framework It provides a concise summary of available research and lays out a research agenda to address the many uncertainties in current knowledge It recommends for instance looking at health differentials across the life course and deciphering the links between factors presumably producing differentials and biopsychosocial mechanisms that lead to impaired health
