purpose Are you ready to share your bliss and fast track the lifestyle you want Naturally Yog Aha divulges the secret to generating sacred space by sharing pure principle The yoking of your awareness with the field of consciousness is suspended as stillness to attain liberation Liberation provides the specific frequency for the conscious union of your choosing This is freedom What vibration do you want to be a match for Inner Experiences: Theory, Measurement, Frequency, Content, and Functions Alain Morin, Thomas M. Brinthaup, Jason D. Runyan, 2016-02-26 One fundamental topic of scientific inquiry in psychology is the study of what William James called the stream of consciousness our ongoing experience of the world and ourselves from within our inner experiences These internal states aka stimulus independent thoughts include inner speech mental imagery feelings sensory awareness internally produced sounds or music unsymbolized thinking and mentalizing thinking about others mental states They may occur automatically during mind wandering daydreaming and resting state episodes and may focus on one s past present or future mental time travel e g autoethic consciousness Inner experiences also may take the form of intrusive or ruminative thoughts The types characteristics frequency content and functions of inner experiences have been studied using a variety of traditional methods among which questionnaires thought listing procedures i e open ended self reports thinking aloud techniques and daily dairies Another approach articulatory suppression consists in blocking participants use of verbal thinking while completing a given task deficits indicate that inner speech plays a causal role in normal task completion Various thought sampling approaches have also been developed in an effort to gather more ecologically valid data Previous thought sampling studies have relied on beepers that signal participants to report aspects of their inner experiences at random intervals More recent studies are exploiting smartphone technology to easily and reliably probe randomly occurring inner experiences in large samples of participants These various measures have allowed researchers to learn some fundamental facts about inner experiences To illustrate it is becoming increasingly clear that prospection future oriented thinking greatly depends on access to autobiographical memory past oriented thinking where recollection of past scenes is used as a template to formulate plausible future scenarios The main goal of the present Research Topic was to offer a scientific platform for the dissemination of current high quality research pertaining to inner experiences Although data on all forms of inner experiences were welcome reports on recent advances in inner speech research were particularly encouraged Here are some examples of topics of interest 1 description and validation of new scales inventories questionnaires measuring any form of inner experience 2 novel uses or improvements of existing measures of inner experiences 3 development of new smartphone technology facilitating or broadening the use of cell phones to sample inner experiences 4 frequency content and functions of various inner experience 5 correlations between personality or cognitive variables and any aspects of inner experiences 6 philosophical or theoretical considerations pertaining to inner experiences and 7 inner experience changes with age **How Do We Know?** Dirk Evers, Antje Jackelen, Taede Smedes, 2010-04-15 A study on the relationship between science and theology with respect to epistemological differences

between religious belief and scientific knowledge *The Emergence of Insight* Carola Salvi, Jennifer Wiley, Steven M. Smith, 2024-05-09 Explores where Aha moments come from and why they feel so wonderful Toward Super-Creativity Sílvia Manuel Brito, 2020-01-29 What is super creativity From the simple creation of a meal to the most sophisticated artificial intelligence system the human brain is capable of responding to the most diverse challenges and problems in increasingly creative and innovative ways This book is an attempt to define super creativity by examining creativity in humans machines and human machine interactions Organized into three sections the volume covers such topics as increasing personal creativity the impact of artificial intelligence and digital devices and the interaction of humans and machines in fields such as healthcare and economics The ^AOxford Handbook of Spontaneous Thought Kieran C.R. Fox, Kalina Christoff, 2018-05-16 This Handbook is the first of its kind to bring together views from neuroscience psychology philosophy phenomenology history education contemplative traditions and clinical practice to explore the ubiquitous but poorly understood mental phenomena that we collectively call spontaneous thought including mind wandering daydreaming insight creative thinking and dreaming Consciousness Dialogues Peter Ralston, 2018-06-12 Peter Ralston responds to 150 questions about consciousness from a global spectrum of people striving to grasp the nature of their own selves This illuminating collection of 150 questions and responses between Peter Ralston and a global spectrum of seekers provides a rare and nuanced look at the nature of consciousness and the path to understanding our true selves Ralston is the author of the groundbreaking trilogy on the existential foundations of the human condition *The Book of Not Knowing* *Pursuing Consciousness* and *The Genius of Being Here* he has selected inquiries from more than two decades of question and answer exchanges with students as they work their way through his communications The mosaic of viewpoints from an astonishing diversity of real people at all levels of consciousness work yields a narrative that is intricate wide ranging intimate and emotionally honest These dialogues expand our understanding of consciousness test our assumptions and interrogate the very process of inquiry Thought in Action Barbara Gail Montero, 2016-04-28 How does thinking affect doing There is a widely held view both in academia and in the popular press that thinking about what you are doing as you are doing it hinders performance Once you have acquired the ability to putt a golf ball play an arpeggio on the piano or parallel park reflecting on your actions leads to inaccuracies blunders and sometimes even utter paralysis that s what is widely believed Experts according to this view don t need to try to do it they just do it But is this true After exploring some of the contemporary and historical manifestations of the idea that highly accomplished skills are automatic and effortless Barbara Gail Montero develops a theory of expertise which emphasizes the role of the conscious mind in expert action She aims to dispel various myths about experts who proceed without any understanding of what guides their action For example that proverbial chicken sexer who can t explain why he makes his judgments He simply doesn t exist Montero s critical task also involves analyzing research in both philosophy and psychology that is taken to show that conscious control and explicit

monitoring of one's movements impedes well practiced skills. She explores a wide range of real life examples of optimal performance culled from sports, the performing arts, chess, nursing, medicine, the military and elsewhere and draws from psychology, neuroscience and literature to offer a refreshing and persuasive view of expertise according to which expert action generally is and ought to be thoughtful, effortful and reflective.

The Disordered Mind Eric R. Kandel, 2018-08-28 A Nobel Prize winning neuroscientist's probing investigation of what brain disorders can tell us about human nature. Eric R. Kandel, the winner of the Nobel Prize in Physiology or Medicine for his foundational research into memory storage in the brain, is one of the pioneers of modern brain science. His work continues to shape our understanding of how learning and memory work and to break down age-old barriers between the sciences and the arts. In his seminal new book *The Disordered Mind*, Kandel draws on a lifetime of pathbreaking research and the work of many other leading neuroscientists to take us on an unusual tour of the brain. He confronts one of the most difficult questions we face: How does our mind, our individual sense of self, emerge from the physical matter of the brain? The brain's 86 billion neurons communicate with one another through very precise connections. But sometimes those connections are disrupted. The brain processes that give rise to our mind can become disordered, resulting in diseases such as autism, depression, schizophrenia, Parkinson's, addiction, and post-traumatic stress disorder. While these disruptions bring great suffering, they can also reveal the mysteries of how the brain produces our most fundamental experiences and capabilities: the very nature of what it means to be human. Studies of autism illuminate the neurological foundations of our social instincts; research into depression offers important insights on emotions and the integrity of the self; and paradigm-shifting work on addiction has led to a new understanding of the relationship between pleasure and willpower. By studying disruptions to typical brain functioning and exploring their potential treatments, we will deepen our understanding of thought, feeling, behavior, memory, and creativity. Only then can we grapple with the big question of how billions of neurons generate consciousness itself.

Newton in the Pulpit Dale Albert Johnson, 2016-10-09 This book is an exploration of neurology and consciousness in the religious brain and scientific brain and how creativity and discovery are mediated from the quantum to classical levels.

That's Funny You Don't Look Like A Teacher! Sandra J. Weber, Claudia Mitchell, 2002-11-01 What do you see when you think of teacher? Where does what you see come from? This is a book about the images of teachers and teaching which permeate the everyday lives of children and adults, shaping in important but unrecognised ways their notions of whom teachers are and what they do. The authors show how, using a creative interdisciplinary approach, it is possible to analyse drawings of teachers, television programmes, films, cartoons, comics, and even Barbie dolls. Illustrated with colour reproductions and excerpts from interviews and journals, this book should appeal to teachers, academics, and anyone who is interested in the popular culture of childhood, gender issues, professional identity, and teacher education.
