Training to Fly Military Flight Training 1907 1945 is an institutional history of flight training by the predecessor organizations of the United States Air Force The U S Army purchased its first airplane built and successfully flown by Orville and Wilbur Wright in 1909 and placed both lighter and heavier than air aeronautics in the Division of Military Aeronautics of the Signal Corps As pilots and observers in the Air Service of the American Expeditionary Forces Americans flew combat missions in France during the Great War In the first postwar decade airmen achieved a measure of recognition with the establishment of the Air Corps and during World War II the Army Air Forces attained equal status with the Army Ground Forces During this first era of military aviation as described by Rebecca Cameron in *Training to Fly* the groundwork was laid for the independent United States Air Force Those were extraordinarily fertile years of invention and innovation in aircraft engine and avionics technologies It was a period in which an air force culture was created one that was a product of individual personalities of the demands of a technologically oriented officer corps who served as the fighting force and of patterns of professional development and identity unique to airmen Most critical a flight training system was established on firm footing whose effective test came in combat in World War II and whose organization and methods continue virtually intact to the present day This volume is based primarily on official documents that are housed in the National Archives and Records Administration Some dating from World War II remained unconsulted and languishing in dust covered boxes until the author's research required that they be declassified She has relied upon memoirs and other first person accounts to give a human face to training policies as found in those dry official records *Training to Fly* is the first definitive study of this important subject Training is often overlooked because operations especially descriptions of aerial combat have attracted the greatest attention of scholars and the popular press Yet the success of any military action as we have learned over and over is inevitably based upon the quality of training That training is further enhanced by an understanding of its history of what has failed and what has worked **List of Certificated Pilot Schools** United States. Federal Aviation Administration. Office of Flight Operations, 1980 **To Be An Airline Pilot** Andrew Cook, 2012-05-01

If your dream is to be an airline pilot or you would like to know what it takes this book reflects the experiences thoughts and findings of a trainee pilot throughout the journey that took him into the right hand seat of a jet airliner The book covers everything that you need to consider before and during the training process including where to train and how to raise funds The flying course structure and ground school subjects are detailed and many sample exam questions are included to give a flavour of what lies ahead The book also looks behind the scenes at life on a training campus and considers all the important practicalities before going on to look at how to find that dream job *Flying Magazine* ,2001-04
