

AIDC F-CK-1 Ching-kuo

Work began on Taiwan's first homegrown fighter aircraft in the early 1980s, when the decision was taken to field a replacement for the Northrop F-5 and Lockheed F-104 then in service with the Republic of China Air Force (ROC AF).

F-104-10

Single-seat F-104-10s were ordered under USMC in 1980 to replace the last Lockheed fighter aircraft. Taiwan fighter wing had ordered three F-104-10s. The aircraft is equipped with wings and all electronic modules, as well as the engine.

The resulting Indigenous Defense Fighter (IDF) was given the go-ahead in 1980 and the Aerospace Industry Development Center (AIDC) took the lead in the project. The ambitious nature of the programme led to it being broken down into four separate development areas: airframe (in which AIDC was assisted by General Dynamics), engine (General Electric), weapons (General Electric), electronics and other and air-to-air missiles.

Four prototypes of the F-CK-1 were completed, the first planning for Ching-kuo. The name of the former Taiwanese president. The first flight was mounted on 28 May 1988 and a total of 10 pre-production aircraft were then delivered for test work between 1988 and 1989.

At one time, the ROC AF expected to receive as many as 100 F-CK-1s to re-equip its fighter force, but numbers were cut to 130 after the United States granted permission to export the F-16 to Taiwan in the early 1990s.

The first production model - single-seat F-CK-1A and two-seat F-CK-1B - were delivered to the Ching-Chuan Kang Air Base, Taichung, in 1990.

Replacing the unit's aging F-104s. As well as a 30mm (1.18in) M61A1 Vulcan air cannon (only option), the F-CK-1 carried a primary air-to-air armament of indigenous Taiwan Chin-2 (TC-2) medium-range air-to-air missiles (offering air-to-air combat), but of which could be mounted in tandem before the fuselage. These were complemented by short-range TC-1 missiles with infrared guidance, or US-made AIM-9P Sidewinders.

At first, the F-CK-1 was primarily used as an air defense fighter, operating mainly at low level. This was due to the relatively limited power output of the F-104 turbojets, the United States being unwilling to provide more potent engines at the time. While the F-CK-1 retains this propensity, efforts were begun to increase its capabilities in other ways, including adding radar warning receivers (RWR) early in its career.

phases. The first of these addressed avionics, including the cockpit, infrared computers, radar and identification threat or low system. The second phase dealt with the weapons and stores, including new conventional fuel tanks (CFTs). Lockheed Martin assisted in these efforts and a first prototype of the mid-life upgrade was flown in October 2008. Early testing revealed the F-104 was too heavy for the aircraft to launch thrust and these were omitted.

The ROC AF designated the upgraded jet as the F-CK-1C (single-seat) and F-CK-1D (two-seat) and these feature three modifications beyond the cockpit, rather than the previous two, plus a new flight control computer and a revised TC-2 Chin-2 (TC-2) missile with additional operating modes.

Eventually, all surviving aircraft were updated to the new configuration under a program known as Hsiao-Chen. The last two upgraded aircraft were delivered in July 2017.

Among the significant advantages offered to the F-CK-1C/D is a long-range standoff attack capability,

provided using the Hsiao-Chen cruise missile that has a range of around 100km (60 miles) and is armed with a submunition warhead. The upgraded fighter can also carry four TC-2 air-to-air missiles, including the TC-2C variant with longer range.
