Silicon Carbide Technology for Advanced Human Healthcare Applications Stephen E. Saddow, 2022-07-13 After over two decades of focused research and development, silicon carbide (SiC) is now ready for use in the healthcare sector. *Silicon Carbide Technology for Advanced Human Healthcare Applications* provides an up to date assessment of SiC devices for long term human use. It explores a plethora of applications that SiC is uniquely positioned for in human healthcare, beginning with the three primary areas of technology which are closest to human trials and thus adoption in the healthcare industry: neural implants and spinal cord repair, graphene and biosensors, and finally deep tissue cancer therapy using SiC nanotechnology. Biomedical inspired engineers, scientists, and healthcare professionals will find this book to be very useful in two ways: I as a guide to new ways to design and develop advanced medical devices, and II as a reference for new developments in the field. The book's intent is to stimulate ideas for further technological enhancements and breakthroughs which will provide alternative solutions for human healthcare applications. Discusses the utilization of SiC materials for biomedical applications. Provides a logical pathway to understand why SiC is ideal for several critical applications, in particular for long term implantable devices, and will serve as a guide to new ways to design and develop advanced medical devices. Serves as a reference for new developments in the field and as a technology resource for medical doctors and practitioners looking to identify and implement advanced engineering solutions to everyday medical challenges that currently lack long term, cost effective solutions.
