Financial Econometrics,

Mathematics and Statistics Cheng-Few Lee, Hong-Yi Chen, John Lee, 2019-06-03 This rigorous textbook introduces graduate students to the principles of econometrics and statistics with a focus on methods and applications in financial research. Financial Econometrics Mathematics and Statistics introduces tools and methods important for both finance and accounting that assist with asset pricing, corporate finance, options and futures, and conducting financial accounting research. Divided into four parts, the text begins with topics related to regression and financial econometrics. Subsequent sections describe time series analyses, the role of binomial, multi-nomial, and log-normal distributions in option pricing models, and the application of statistics analyses to risk management. The real-world applications and problems offer students a unique insight into such topics as heteroskedasticity, regression, simultaneous equation models, panel data analysis, time series analysis, and generalized method of moments. Written by leading academics in the quantitative finance field, it allows readers to implement the principles behind financial econometrics and statistics through real-world applications and problem sets. This textbook will appeal to a less-served market of upper undergraduate and graduate students in finance, economics, and statistics. **A Mathematical Approach to Economic Analysis** Peter Toumanoff, Farrokh Nourzad, 1994. A Mathematical Approach to Economic Analysis is a student-friendly, readable text that motivates economic students to learn math and mathematics. Students learn economics by providing immediate and useful economic applications with every mathematical concept. Toumanoff and Nourzad's ability to assist student comprehension by using a building block approach and including several instructional aids in the text makes this book perfect for in and out of classroom use. **Technometrics**, 2005.
