Foundations of Linear Algebra Jonathan S. Golan, 2013-03-09 This book is an extensively revised version of my textbook esodot HaAlgebra HaLinariit The Foundations of Linear Algebra used at many universities in Israel It is designed for a comprehensive one year course in linear algebra 112 lecture hours for mathematics majors Therefore I assume that the student already has a certain amount of mathematical background including set theory mathematical induction basic analytic geometry and elementary calculus as well as a modicum of mathematical sophistication My intention is to provide not only a solid basis in the abstract theory of linear algebra but also to provide examples of the application of this theory to other branches of mathematics and computer science Thus for example the introduction of finite fields is dictated by the needs of students studying algebraic coding theory as an immediate followup to their linear algebra studies Many of the students studying linear algebra either are familiar with the care and feeding of computers before they begin their studies or are simultaneously enrolled in an introductory computer science course Therefore consideration of the more computational aspects of linear algebra such as the solution of systems of linear equations and the calculation of eigenvalues is delayed until all students are assumed able to write computer programs for this purpose Beginning with Chapter VII there is an implicit assumption that the student has access to a personal computer and knows how to use it
