

Baby's growing brain

Even though the brain keeps growing and changing into adulthood, the first 5 years are an important time of rapid growth that helps build the foundation for all future learning.

The brain is responsible for:

- ✓ Movement
- ✓ Language
- ✓ Emotion
- ✓ Learning and problem-solving

The brain doubles in size in the first year!

By age 3, it's about 80% of an adult size brain

The early years set the stage for advanced abilities

- ✓ Self-regulation
- ✓ Problem solving
- ✓ Communication

Supporting baby's brain development

Babies are born ready to learn! Parents and caregivers can support healthy brain development by interacting with their baby using language, play, and care.

Breastfeeding

is associated with improved cognitive ability

Sleep

supports healthy development as baby grows from infancy into early childhood

Nurture & interact

- ✓ Make eye contact often while feeding
- ✓ Spend time cuddling and holding your child
- ✓ Provide opportunities to play and explore
- ✓ Read, talk, and sing to your child starting at birth

Iron supports learning ability

Starting at about 6 months, introduce dietary sources such as meats and iron-fortified cereals, and continue throughout the first 3 years

Healthy fats are brain building blocks

Omega-3, omega-6 and DHA are found in fatty fish, seafood, vegetable oils, and baby-safe forms of nuts and seeds

B vitamins support brain function

Found in infant cereals, milk, meat, eggs, fish, and dark green vegetables

Choline, a vitamin, supports memory development

Found in eggs, dairy products, and some fortified foods

Key Milestones*

2 months:

- ✓ Looks at you
- ✓ Looks at a toy for several seconds

6 months:

- ✓ Puts things in mouth to explore them
- ✓ Reaches to grab a toy
- ✓ Closes lips to show she doesn't want more food
- ✓ Laughs with you

9 months:

- ✓ Looks for things when dropped out of sight (like a spoon or toy)
- ✓ Rings objects together

Nutrients for brain development

During infancy and toddlerhood, a baby's brain forms many complex systems they will use throughout their entire life. Getting the right nutrients from infancy to toddlerhood is important to help the brain develop to its fullest.

Baby's key developmental milestones

First smiles, "peek-a-boo" games, and wobbly steps are all developmental milestones. While babies develop at their own pace, there are typical ages when these milestones occur.

Piaget offered the first viable theory of knowledge acquisition that centered on the great themes discussed by Kant: object, space, time, and causality. The essence of Piaget's theory is constructivism: The building of concepts from simpler perceptual and cognitive precursors, in particular from experience gained through manual behaviors and observation. The constructivist view was disputed by a generation of researchers dedicated to the idea of the competent infant endowed with knowledge, say of permanent objects that emerged prior to facile manual behaviors. Taking this possibility further, it has been proposed that many fundamental cognitive mechanisms—reasoning, event prediction, decision making, hypothesis testing, and deduction—operate independently of all experience and are in this sense innate. The competent infant view has an intuitive appeal attested to by its widespread popularity, and it enjoys a kind of parsimony. It avoids the supposed philosophical pitfall posed by having to account for novel forms of knowledge in inductive learners. But this view leaves unaddressed a vital challenge: to understand the mechanisms by which new knowledge arises. This challenge has now been met. The neoconstructivist approach is rooted in Piaget's constructivist emphasis on developmental mechanisms yet also reflects modern advances in our understanding of learning mechanisms, cortical development, and modeling. This book brings together for the first time theoretical views that embrace computational models and developmental neurobiology and emphasize the interplay of time, experience, and cortical architecture to explain emergent knowledge, with an empirical line of research identifying a set of general-purpose sensory, perceptual, and learning mechanisms that guide knowledge acquisition across different domains and through development.
