Asthma Guidelines:

Clinical Asthma Jonathan A. Bernstein, Mark L. Levy, 2014-02-06 Enormous progress in asthma research has been made in the past 50 years including a greater understanding of its complex pathogenesis and new and more effective therapies. Consequently the scientific literature has grown vast and can be difficult to integrate. With contributions from a distinguished panel of world renowned authors *Clinical Asthma Theory and Practice* presents a comprehensive study of both the common and the more challenging problems faced by all health care personnel who treat patients with asthma. The book is divided into seven sections starting with the basics of asthma and ending with a discussion on the approach to asthma worldwide and in the primary care setting. Reflecting a strong clinical emphasis each chapter begins with a patient case study supported by essential background information on the basic science and clinical decision making process. This is followed by a discussion of clinical evaluation and management. The multidisciplinary coverage explores a range of topics including genetics, inflammation, immunology and the identification of different endotypes. Using a bench to bedside approach the book links basic science to the clinical management of asthma and explores options for improvement. The carefully selected authorship from experts worldwide presents a truly global outlook.

Implementation of the Asthma Practice Guideline in the Army Medical Department Donna O. Farley, Shan Cretin, Georges Vernez, Suzanne Pieklik, Elaine Quiter, 2005-12-01 In partnership with the Army Medical Department RAND worked to implement clinical practice guidelines. This report evaluates the asthma guideline demonstration. It documents the actions, assesses effects and measures the quality and limitations of data for monitoring outcomes. The authors found that the implementation scored successes but resource limitations and organizational barriers curbed progress. They conclude that flexibility, monitoring and training are the keys to implementing the guidelines. They also found that patient education needed improvement.
