Bone Graft Site and Harvesting Technique* Venkatesh Hange, 2019-10-15. Document from the year 2018 in the subject Medicine. Other course oral maxillofacial surgery language English abstract. Most dental practitioners are unaware or lack of bone biology, graft materials, membranes, bone harvesting, or bone grafting as these topics are not uniformly explained in various hands-on cadaver live surgery or lecture programs. Intraoral bone grafts are used in the field of surgical oncology, head and neck. Extraoral autografts are gold standard but intraoral autografts are advantageous because of their close proximity to the operating field. Also, they minimize the need of second operative procedures for harvesting graft. Thus, they emerge as a new alternative to classic extraoral autografts. They are also used in maxillofacial surgery, trauma, plastic surgery, et cetera. This book will be useful for dental students, implantologists, prosthodontists, oral surgeons, oncosurgeons, and orthopaedic surgeons. Reconstruction of maxillofacial continuity defects has always been a challenging task for the scientists and surgeons over the years. The main objective of the maxillofacial region's reconstruction is to restore the facial form, function, complete rehabilitation of occlusion and articulation. A refinement in surgical technique and methods of reconstruction has improved patient's quality of life. Bone Grafting is one of the commonest operations performed in Orthopaedics. Its indications include non-union, delayed union, packing bone cysts and cavities, elevating depressed articular fractures, and reconstruction of large
