Evolving Software Processes Arif Ali Khan, Dac-Nhuong Le, 2022-01-05

EVOLVING SOFTWARE PROCESSES The book provides basic building blocks of evolution in software processes such as DevOps scaling agile process in GSD in order to lay a solid foundation for successful and sustainable future processes One might argue that there are already many books that include descriptions of software processes The answer is yes but Becoming acquainted with existing software processes is not enough It is tremendously important to understand the evolution and advancement in software processes so that developers appropriately address the problems applications and environments to which they are applied Providing basic knowledge for these important tasks is the main goal of this book Industry is in search of software process management capabilities The emergence of the COVID 19 pandemic emphasizes the industry's need for software specific process management capabilities Most of today's products and services are based to a significant degree on software and are the results of largescale development programs The success of such programs heavily depends on process management capabilities because they typically require the coordination of hundreds or thousands of developers across different disciplines Additionally software and system development are usually distributed across geographical cultural and temporal boundaries which make the process management activities more challenging in the current pandemic situation This book presents an extremely comprehensive overview of the evolution in software processes and provides a platform for practitioners researchers and students to discuss the studies used for managing aspects of the software process including managerial organizational economic and technical It provides an opportunity to present empirical evidence as well as proposes new techniques tools frameworks and approaches to maximize the significance of software process management Audience The book will be used by practitioners researchers software engineers and those in software process management DevOps agile and global software development

The Higher Maturity Level of the Development Processes Through Adopting Key Performance Indicators (KPIs) and Lean Thinking in the Automotive Industry Salma Idriss Ismail Ali, 2024-09-19

Master's Thesis from the year 2024 in the subject Business economics Project Management grade 1.3 University of Applied Sciences Dortmund Economics course Project Management language English abstract The automotive industry is experiencing significant transformation due to the introduction of advanced technologies such as advanced driver assistance systems ADAS autonomous driving connected vehicles and vehicle electrification These advancements have considerably increased the complexity of the electronics and software integrated

into modern cars. Consequently, original equipment manufacturers (OEMs) and their electrical system suppliers face substantial pressure to ensure high quality at every stage from system design to specific domains by adhering to industry standards and best practices. Thus, Automotive SPICE (Software Process Improvement and Capability dEtermination) was developed to address the challenges in automotive system development. OEMs now mandate that suppliers achieve at least Automotive SPICE process capability level 3, which signifies that a supplier's development processes are well defined, consistently implemented, and effectively managed. Elmos is striving to fulfill OEMs' mandate. Automotive SPICE guides the necessary processes and attributes to meet automotive industry requirements. However, it does not dictate specific methodologies or tools for implementation. This study proposes a comprehensive model to achieve process capability level 3 and beyond by integrating Automotive SPICE with key performance indicators (KPIs), lean thinking, and the 5 Whys technique. The research methodology combined an integrative literature review with qualitative interviews with an industry expert. The findings from the literature review were validated through these expert interviews. The study identified crucial metrics for evaluating the efficiency and effectiveness of system and software development processes, such as requirements quality, reusability, requirements volatility, project management, risk management, architectural design, and product quality. Integrating lean principles can significantly improve development processes by streamlining workflows, reducing waste, and fostering continuous improvement. Additionally, the 5 Whys approach is a valuable tool for analyzing performance deviations and identifying root causes of problems. Overall, by adopting this holistic approach, companies can improve the maturity level of their development processes. The chosen 15 key metrics form a robust basis for delivering actionable insights into the performance of Elmos development processes.
