Joining of Materials and Structures Robert W. Messler, 2004-08-05 *Joining of Materials and Structures* is the first and only complete and highly readable treatment of the options for joining conventional materials and the structures they comprise in conventional and unconventional ways and for joining emerging materials and structures in novel ways. Joining by mechanical fasteners, integral designed or formed in features, adhesives, welding, brazing, soldering, thermal spraying and hybrid processes are addressed as processes and technologies as are issues associated with the joining of metals, ceramics including cement and concrete, glass, plastics and composites including wood as well as for the first time anywhere, living tissue. While focused on materials issues, issues related to joint design, production, processing, quality assurance, process economics and joint performance in service are not ignored. The book is written for engineers from an in-training student to a seasoned practitioner by an engineer who chose to teach after years of practice. By reading and referring to this book, the solutions to joining problems will be within one's grasp. Key Features: Unprecedented coverage of all joining options from lashings to lasers in 10 chapters. Uniquely complete coverage of all materials including living tissues in 6 chapters. Richly illustrated with 76 photographs and 233 illustrations or plots. Practice Questions and Problems for use as a text or for reviewing to aid for comprehension. Coverage of all of major joining technologies including welding, soldering, brazing, adhesive and cement bonding, pressure fusion, riveting, bolting, snap fits and more.
