Subject Guide to Books in Print, 1993 *Materials Evaluation*, 2006 *Nondestructive Testing and Evaluation of Fiber-Reinforced Composite Structures* Shuncong Zhong, Walter Nsengiyumva, 2022-04-01 This book presents a detailed description of the most common nondestructive testing NDT techniques used for the testing and evaluation fiber reinforced composite structures during manufacturing and or in service stages In order to facilitate the understanding and the utility of the different NDT techniques presented the book first provides some information regarding the defects and material degradation mechanisms observed in fiber reinforced composite structures as well as their general description and most probable causes It is written based on the extensive scientific research and engineering backgrounds of the authors in the NDT and structural health monitoring SHM of structural systems from various areas including electrical mechanical materials civil and biomedical engineering Pursuing a rigorous approach the book establishes a fundamental framework for the NDT of fiber reinforced composite structures while emphasizing on the importance of technique s spatial resolution integrated systems analysis and the significance of the influence stemming from the applicability of the NDT and the physical parameters of the test structures in the selection and utilization of adequate NDT techniques The book is intended for students who are interested in the NDT of fiber reinforced composite structures researchers investigating the applicability of different NDT techniques to the inspections of structural systems and NDT researchers and engineers working on the optimization of NDT systems for specific applications involving the use of fiber reinforced composite structures

AMMTIAC Quarterly, 2006 **NDE Handbook** Knud G. Bøving, 2014-05-12 NDE Handbook Non Destructive Examination Methods for Condition Monitoring deals with monitoring of equipment structures and pipes in mechanical engineering in the processing industry in construction and in electrotechnical fields The book explains acoustic cross correlation involving leak detection in buried main water pipes or heating pipes by using special instruments to detect the flow noise generated at the point of fracture The acoustic emission method based on collection of vibrations or sound waves from the suspected material can detect changes occurring in the material Magnetic methods and eddy currents can measure the thickness of the coating on specific materials dye penetrants can expose cracks or cleavages in surface materials and emission spectroscopy can identify or sort the chemical composition of steel The book also describes an endoscope used to visualize the interior of objects and the electrical resistance probe that can measure the loss of material based on changes in the electrical resistance Other NDE methods that are used by investigators include stress pattern analysis by thermal emission pulsed video thermography Moire contour mapping holographic interferometry computerized tomography and positron annihilation The book will prove valuable for engineers physicists technicians operators involved in material research risk prevention or accident control and for general readers interested in materials quality and specifications
