Assessing The Urban Microclimate Erg Ucd:

The Urban Heat Island Iain D. Stewart, Gerald Mills, 2021-05-25 The Urban Heat Island UHI is an area of growing interest for many people studying the urban environment and local global climate change The UHI has been scientifically studied for 200 years and although it is an apparently simple phenomenon there is considerable confusion around the different types of UHI and their assessment The Urban Heat Island A Guidebook provides simple instructions for measuring and analysing the phenomenon as well as greater context for defining the UHI and the impacts it can have Readers will be empowered to work within a set of guidelines that enable direct comparison of UHI effects across diverse settings while informing a wide range of climate mitigation and adaptation programs to modify human behaviour and the built form This opens the door to true global assessments of local climate change in cities Urban planning and design strategies can then be evaluated for their effectiveness at mitigating these changes Covers both on surface and near surface or canopy measurements and impacts of Urban Heat Islands UHI Provides a set of best practices and guidelines for UHI observation and analysis Includes both conceptual overviews and practical instructions for a wide range of uses **Urban Microclimate Modelling for Comfort**

and Energy Studies Massimo Palme, Agnese Salvati, 2021-04-08 This book discusses urban microclimate and heat related risks in urban areas brought on by the combination of global climate change effects and local modification of climate determined by extensive urbanization such as the Urban heat island phenomenon This matter is relevant to almost all urbanized areas in the world where the increase of urban population and air temperature is expected to endanger both the overall health of the population and the energy supply for the functioning of urban systems The book details the inter relationship between urban morphology microclimate and building energy performance and presents a multidisciplinary approach that brings together Urban Climatology Engineering and Architectural knowledge to support the development of reliable models and tools for research and practice This book is a useful tool for architects and building energy modelers urban planners and geographers who need a practical guide to realize basic urban microclimate simulation for use in both academic research and planning practice **Urban Microclimate** Evyatar Erell, David Pearlmutter, Terry J.

Williamson, 2011 This title provides architects and urban design professionals with an understanding of how the structure of built spaces at all scales affects microclimatic conditions in the space between buildings and analyses the interaction between microclimate and each element of the urban landscape *The Urban Microclimate as Artifact* Sascha Roesler, Madlen Kobi, 2018-09-24 Urban microclimates cannot be explained solely on the basis of scientific phenomena but are also affected materially and spatially by the city's local architecture The layout design and facade construction of buildings have a major impact on wind and temperature conditions For this reason architecture and urban design that have an effect on microclimates must be investigated in their social and cultural contexts The publication uses international case studies to explain these relationships The focus is on manifestations of urban microclimates in an architectural and urban

design context The places investigated are located in France Italy the USA New Zealand the Philippines Taiwan and Burkina Faso

Urban Form Influence on Microclimate and Building Cooling Demand Daniela Maiullari, 2023 Urban form plays a critical role when planning city transitions toward decarbonization However in urban climate conditions the complex relationship between urban form and cooling demand remains understudied This thesis develops integrated approaches and knowledge in the transdisciplinary domain of urban morphology urban climatology and energy related fields while addressing the question How does urban form influence building cooling demand in urban microclimate conditions and how can the magnitude of the relationship be assessed By answering this main research question the thesis delivers a threefold contribution First it contributes to the conceptualization and understanding of both the intrinsic and the extrinsic role of urban form by identifying urban form characteristics that directly influence building cooling demand and indirectly contribute to shaping urban microclimate conditions in buildings surroundings Second the thesis contributes to increasing the assessment accuracy of urban form related climate and energy performance It does so by developing a quantitative morphological method to identify Local Climate Types LCTs and by developing a modelling method that enhances the use of microclimate data as boundary conditions for energy demand assessments Finally for the city of Rotterdam the testing of these novel methods provides an understanding of how and to what extent the form of buildings and contexts influence building cooling demand

Counteracting Urban Heat Island Effects in a Global Climate Change Scenario Francesco Musco, 2020-10-08 Urban heat islands are a new type of microclimatic phenomenon that causes a significant increase in the temperature of cities compared to surrounding areas The phenomenon has been enforced by the current trend towards climate change Although experts consider urban heat islands an urgent European Union public health concern there are too few policies that address it The EU carried out a project to learn more about this phenomenon through pilot initiatives The pilots included feasibility studies and strategies for appropriately altering planning rules and governance to tackle the problem of urban heat islands The pilots were carried out in eight metropolitan areas Bologna Modena Budapest Ljubljana Lodz Prague Stuttgart Venice Padova and Vienna The feasibility studies carried out in these pilot areas focused on the specific morphology of EU urban areas which are often characterised by the presence of historical old towns This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use All rights not granted by the work's license are retained by the author or authors
