Elementary Algebra with Early Systems of Equations Tom Carson, Elyn Gillespie, 2005-02 Tom Carson engages students in the learning process by

meeting them where they are and leading them to where they need to be through the determination of their individual learning style the development of study skills and the integration of learning strategies that help each student succeed Elementary Algebra with Early Systems of Equations is a book for the student The authors goal is to help build students confidence their understanding and appreciation of math and their basic skills by presenting an extremely user friendly text that models a framework in which students can succeed Unfortunately students who place into developmental math courses often struggle with math anxiety due to bad experiences in past math courses Developmental math students often have never developed nor applied a study system in mathematics To address these needs the authors have framed three goals for Elementary Algebra 1 reduce math anxiety 2 teach for understanding and 3 foster critical thinking and enthusiasm The authors writing style is extremely student friendly They talk to students in their own language and walk them through the concepts explaining not only how to do the math but also why it works and where it comes from rather than using the monkey see monkey do approach that some books take Elementary Algebra with Early Systems of Equations as the title implies places the topic of Systems of Equations early in the text in Chapter 5 This organization is ideal for those instructors who prefer to teach systems of equations immediately following the chapter on graphing and the chapters prior to polynomials and factoring For those who prefer to teach the topic later Elementary Algebra by the same author team places Systems of Equations in Chapter 8 Foundations of Algebra Solving Linear Equations and Inequalities Problem Solving Graphing Linear Equations and Inequalities Systems of Equations Polynomials Factoring Rational Expressions and Equations Roots and Radicals Quadratic Equations For all readers interested in elementary algebra

mathematics **Introduction to Matrices and Vectors** Jacob T. Schwartz, 2012-05-23 Realizing that matrices can be a confusing topic for the beginner the author of this undergraduate text has made things as clear as possible by focusing on problem solving rather than elaborate proofs He begins with the basics offering students a solid foundation for the later chapters on using special matrices to solve problems The first three chapters present the basics of matrices including addition multiplication and division and give solid practice in the areas of matrix manipulation where the laws of algebra do not apply In later chapters the author introduces vectors and shows how to use vectors and matrices to solve systems of linear equations He also covers special matrices including complex numbers quaternion matrices and matrices with complex entries and transpose matrices the trace of a matrix the cross product of matrices eigenvalues and eigenvectors and infinite series of matrices Exercises at the end of each section give students further practice in problem solving Prerequisites include a background in algebra and in the later chapters a knowledge of solid geometry The book was designed as an introductory text for college freshmen and sophomores but selected chapters can also be used to supplement advanced high school classes Professionals who need a better understanding or review of the subject will also benefit from this concise guide
