 - Longitudinal studies are designed to identify how much change occurred, and what phenomenon were associated with change
 - Types of longitudinal designs
 - Trend studies
 - Cohort studies
 - Panel studies
- ★ Exploratory research designs
 - Used when a researcher is exploring a subject area that is relatively new and unstudied
 - They can be qualitative or quantitative and often use mixture of both methods
 - Designed to begin the process of knowledge building about research problem or question
- ★ Descriptive research designs

Optimal Enterprise Mikhail V. Belov, Dmitry A. Novikov, 2021-07-28 In the modern world, most gross product is created within Enterprise firms, project programs, state agencies, transnational corporations, and their divisions, as well as various associations and compositions of the above entities. Enterprises, being on the one hand complex and on the other hand widespread systems, are the subject matter of cybernetics, system theory, operations research, management sciences, and many other fields of knowledge. However, the complexity of the system obstructs the development of mathematically rigorous foundations for Enterprise control. Moreover, methods of operations research and related sciences, which are widely used in practice, provide optimization of the constituents of an Enterprise without modeling it as a whole system. But the optimization of parts does not lead to the optimality of the whole, and also the absence of top-down and holistic mathematical models of Enterprise contradicts the principle of holism and the system approach. The approach in this book looks first at Enterprise Systems and their essential aspects as complex sociotechnical systems composed of integrated sets of structural and process models. Chapters 1 and 2: A uniform description of all the heterogeneous fields of the modern Enterprise: marketing, sales, manufacturing, HR, finance, etc. is then made, and the Enterprise Control Problem is posed as a top-down and holistic mathematical optimization problem. Chapter 3: Original models and methods of contract theory. Chapter 4: technology management. Chapter 5: human behavior and human capital. Chapter 6: and complex activity and resource planning. Chapter 7: are developed to solve the problem. Structural processes and mathematical models constitute an Optimal Enterprise Control Framework. Chapter 8: that provides a practical solution to the Enterprise Control Problem. This book is a resource for postgraduate and doctoral students, postdoctoral researchers, and professors with research interests in the following fields of science: Fundamental Complex Systems, study Complex Systems, Engineering Enterprise Systems, Engineering Applications of Operations Research, Optimization, Probability and Stochastic processes to Management Science, Economics and Business Theory of the Firm, Business and Management, general strategy, leadership, organization, management, operations, management, and management information systems, Theory of Business Processes, Business Processes Improvement and Reengineering.
