6.1 INTRODUCTORY CONCEPTS

- Structural welding is a process by which the parts that are to be connected are heated and fused, with supplementary molten metal at the joint.
- A relatively small depth of material will become molten, and upon cooling, the structural steel and weld metal will act as one continuous part where they are joined.

Seismic Design of Buildings to Eurocode 8 Ahmed Elghazouli,2016-12-19 This book focuses on the seismic design of building structures and their foundations to Eurocode 8 It

covers the principles of seismic design in a clear but brief manner and then links these concepts to the provisions of Eurocode 8. It addresses the fundamental concepts related to seismic hazard, ground motion models, basic dynamics, seismic analysis, siting considerations, structural layout and design philosophies, then leads to the specifics of Eurocode 8. Code procedures are applied with the aid of walk-through design examples which, where possible, deal with a common case study in most chapters. As well as an update throughout, this second edition incorporates three new and topical chapters dedicated to specific seismic design aspects of timber buildings and masonry structures as well as base isolation and supplemental damping. There is renewed interest in the use of sustainable timber buildings and masonry structures still represent a popular choice in many areas. Moreover, seismic isolation and supplemental damping can offer low damage solutions which are being increasingly considered in practice. The book stems primarily from practical short courses on seismic design which have been run over a number of years and through the development of Eurocode 8. The contributors to this book are either specialist academics with significant consulting experience in seismic design or leading practitioners who are actively engaged in large projects in seismic areas. This experience has provided significant insight into important areas in which guidance is required.

Orthotropic Bridges Theory and Design M. S. Troitsky, 1987

Designers' Guide to EN 1993-1-1 Leroy Gardner, D. A. Nethercot, 2005

After some 25 years in preparation, the key parts of EN 1993-1-1 Eurocode 3 Design of steel structures General rules and rules for buildings have now been finalised. Eurocode 3 covers many forms of steel construction and provides the most comprehensive and up-to-date set of design guidance currently available. Throughout this book concentrates on the most commonly encountered aspects of structural steel design with an emphasis on the situation in buildings. Much of its content is therefore devoted to the provisions of the Part 1-1 General rules and rules for buildings of EN 1993. This is however supplemented by material on loading joints and cold-formed design. For each of the principal aspects covered, the book provides background to the structural behaviour, explanation of the codified treatment including departure from existing practice, BS 5950 and numerous worked examples. This Guide should serve as the primary point of reference for designing steel structures to Eurocode 3.
