

Chapter 21- Neuromuscular Disorders and Muscle Spasms

1. Myasthenia Gravis

- Autoantibodies/neuromuscular that impact a cholinergic synapse through a cholinergic junction... leading to an autoimmune response caused by dysfunction of acetylcholine done
 - Infant/young/developing/immunocompromised... autoimmune, failed... respiratory
- Drugs contribute to inhibit the synapse that breaks down acetylcholine... does work, but a weight/force is applied to activate... breakdown is inhibited... preventing muscle weakness
- Signs/Symptoms: progressive muscle weakness
 - Myasthenia Gravis: flaccid paralysis... not backflow and enough acetylcholine is released... that something goes to inhibit the synapse that is causing some that already has acetylcholine... immunogenic (autoimmune)
 - o/Backflow/force → this leads to inhibition of acetylcholine that goes against... that is causing through
 - Pharmacology Drug: **anticholinesterase (AChE)**
 - **Neostigmine (Mestinon)** → inhibits acetylcholinesterase by preventing breakdown of acetylcholine
 - not a treatment drug
 - this patient has more strength when administered in Neostigmine/force
 - **atropine** → o/Backflow/force

2. Multiple Sclerosis

- Autoimmune disease that attacks the myelin sheath of nerve fibers made by spinal cord
 - o/Backflow/force... sensory/motor are compromised
 - Neurological signs/symptoms: weakness, numbness, coordination, sensation
- Drug Therapy
 - **Interferon beta** (beta interferon) → slows disease... symptom and inflammation
 - **Corticosteroids** (steroids) with inflammation
 - **Plasma exchange** (plasma) → removes antibodies from blood that is causing the attack

3. Guillain-Barre Syndrome

- Relapses mostly spontaneous
 - **Pharmacology Drug: **intravenous (IV) gamma globulin****
 - **intravenous (IV) gamma globulin**
 - **plasma exchange** (plasma) → removes antibodies
 - **plasma exchange** (plasma) → removes antibodies

Paraneoplastic Neurologic Disorders, 2024-03-15 This book extensively reviews Paraneoplastic Neurological Syndromes in light of the most recent descriptions of autoantibodies against neuronal cell surface antigens only partly associated with paraneoplastic disorders and the introduction of new immuno oncological drugs that can contribute to causing diseases that are pathogenetically indistinguishable from paraneoplastic syndromes These two new developments have not been addressed in other volumes available on the market Section 1 focuses on immunological defense mechanisms against tumors Besides investigating the pathogenetic mechanisms of these disorders this section will also explore what the introduction of new drugs used in immune checkpoint inhibitor cancer therapy is teaching us in terms of immunopathogenesis The second section will present individual syndromes phenotypical clinical manifestations of the CNS PNS NMJ and muscle These chapters will however be preceded by an epidemiological analysis and a chapter describing the clinical approach to patients with these disorders Consideration will also be given in specific chapters to general therapeutic strategies and the techniques used to search for diagnostically relevant autoantibodies Presentation of the individual diseases will be followed by a third section investigating the role of antibody markers presented in three chapters differentiating cytoplasmic nuclear and neuronal cell surface reactivities The innovative component of the final two sections compared to previously published volumes lies in their presentation of the profile of paraneoplastic diseases by tumor type Special attention will be given to thymoma involved particularly with novel antibodies against surface antigens and

neuroendocrine tumours which are as yet comparatively unexplored in the literature Lastly a clinical update will be provided on gynecological hematological and testicular malignancies The last section will address side effects of the new immunological drugs increasingly used in cancer therapy The high number of neurological complications that occur when tumor checkpoints are inhibited against immune defences provides the ideal experimental model for understanding the pathogenesis of these diseases Profiles paraneoplastic diseases by tumor type Identifies the pathogenetic mechanisms of PNS and provides epidemiological analysis Presents individual syndromes of the CNS PNS NMJ and muscle Investigates the role of antibody markers Differentiates cytoplasmic nuclear and neuronal cell surface reactivities Discusses immune oncological drugs causing diseases that are indistinguishable from PNS Reviews therapeutic strategies and clinical approach to PNS patients
