

Management of the forest ecosystem is a complicated and controversial proposition in our politically charged world (Figures 1-1, 1-2). The social and political sciences have become as important in forest management as the biological sciences that are the basis for modern forest management practices. Biological, political, and social sciences along with business and management skills contribute to the field of study known as **forestry**.

IMPORTANCE OF FORESTS

Thirty percent of the land area in the world is forest land, and forest products are very important to the economies of the developed countries of the world. The importance of the forests of North America and the world goes far beyond the production of wood products such as paper, cardboard, lumber, plywood, and structural beams. Forests also provide solvents, medicines, fuels, and many other products that are important for our health and comfort (Figure 1-3). It is forests and other forms of plant life that restore oxygen to our atmosphere through photosynthesis. Forests function as huge biological filter systems that clean the environment by removing impurities from air and water. They also function in the elemental cycles and in the water cycle.

Biological Value of Forests

A **forest** consists of an area where trees are the most dominant living organisms. The kinds of trees that are found in forests sometimes consist of a single species, but many forests are made up of more than one kind of tree (Figures 1-4, 1-5). Forest environments also include many plants other than trees. Several layers of vegetation called **strata** are found in a forest (Figure 1-6). The tall broadleaf trees form the ceiling or **canopy** at the highest levels. The area beneath the

Figure 1-1 Most Americans believe that it is important to manage forests in ways that will ensure that they will be available to future generations.

Figure 1-2 Forest management has become much more difficult in recent years due to conflicts over appropriate uses of forest resources.
