Domestic Animals Oystein V. Sjaastad, Olav Sand, Knut Hove, 2010 This textbook is primarily targeted towards students of veterinary animal and agricultural sciences but it is also well suited for university courses in general and mammalian physiology The textbook emphasizes functional aspects of physiology The book contains color illustrations short clarifying statements placed in the margin questions and clinical examples *Water in Biomechanical and Related Systems* Adam Gadomski, 2021-04-21 The contributed volume puts emphasis on a superior role of water in bio systems exposed to a mechanical stimulus It is well known that water plays an extraordinary role in our life It feeds mammalian or other organism after distributing over its whole volume to support certain physiological and locomotive friction adhesion processes to mention but two of them both of extreme relevance Water content not only in the mammalian organism but also in other biosystems such as whether those of soil which is equipped with microbiome or the ones pertinent to plants having their own natural network of water vessels is always subjected to a force field The decisive force field applied to the biosystems makes them biomechanically agitated irrespective of whether they are subjected to external or internal force field conditions It ought to be noted that the decisive mechanical factor shows up in a close relation with the space and time scale in which it is causing certain specific phenomena to occur The scale problem emphasizing the range of action of gravitational force thus the millimeter or bigger force vs distance scale is supposed to enter the so called macroscale approach to water transportation through soil or plants roots system It is merely related to a percolation problem which assumes to properly inspect the random network architecture assigned to the biosystems invoked The capillarity conditions turn out to be of prior importance and the porous medium effect has to be treated and solved in a fairly approximate way The deeper the scale is penetrated by a force exerting and hydrated agent the more non gravitational force fields manifest This can be envisaged in terms of the corresponding thermodynamic non Newtonian forces and the phenomena of interest are mostly attributed to suitable changes of the osmotic pressure In low Reynolds number conditions thus in the sub micrometer distance scale zone they are related with the corresponding viscosity changes of the aqueous e g cytoplasmatic solutions of semi diluted and concentrated but also electrolytic characteristics For example they can be observed in articulating systems of mammals in their skin and to some extent in other living beings such as lizards geckos or even insects Through their articulating devices an external mechanical stimulus is transmitted from macro to nanoscale wherein the corresponding osmotic pressure conditions apply The content of the proposed work can be distributed twofold First the biomechanical mammalian type or similar systems with extraordinary relevance of water for their functioning will be presented also including a presentation of water itself as a key physicochemical system medium Second the suitably chosen related systems mainly of soil and plant

addressing provenience will be examined thoroughly As a common denominator of all of them it is proposed to look at their hydrophobic and or de hydration effects and how do they impact on their basic mechanical and related such as chemo mechanical or piezoelectric etc properties An additional tacit assumption employed throughout the monograph concerns statistical scalability of the presented biosystems which is equivalent to take for granted a certain similarity between local and global system s properties mostly those of mechanical nature The presented work s chapters also focus on biodiversity and ecological aspects in the world of animals and plants and the related systems The chapters contents underscore the bioinspiration as the key landmark of the proposed monograph

Reading the Story in DNA Lindell Bromham,2008 The world is full of DNA The salad in your sandwich the pollen in the air even the dirt on your shoes contains DNA from which a vast amount of information can be gained including the identification of individuals and species the structure and distribution of populations the origins of lineages and the pace and mechanisms of evolutionary change Reading the story in DNA is a beginner s guide to molecular evolution and is the perfect companion on the journey to a proper understanding of molecular data The central theme of the book is that in order to get ecological or evolutionary information out of molecular data you must understand the way that the molecular data evolves and the influence that the assumptions you make have on the answers you get The book blends beautifully clear explanations with cutting edge examples from the research literature drawing on the fields of biodiversity conservation biology epidemiology phylogeography evolutionary development and ancient DNA to explore topics such as molecular evolutionary theory phylogenetics molecular clocks detecting selection and recombination and identifying individuals from molecular data Technical detail is set apart from the main text allowing the student to approach the material in different ways read only the text and skip the finer details use the text to understand the technical details or vice versa or identify key case studies and read the concepts and methods particular to that case

Features The first text to make the use of molecular data in whole organism biology truly accessible to students Engaging yet highly informative writing style captures the author s genuine and infectious passion for her subject Stunning full color presentation is the perfect complement to the author s written prose Blends clear straightforward explanations with cutting edge case studies there is no sacrifice of content for the sake of accessibility Avoids mathematical and statistical detail to focus on the conceptual basis of molecular analysis Unique combination of text technical information and case studies enables flexible use in whatever way works for the reader Online Resource Centre features additional resources for both lecturers and students For instructors the Online Resource Centre features figures from the book in electronic format ready to download and tutorial exercises and practical projects For students the website offers annotated weblinks a flashcard glossary topical updates and links to relevant journal articles and websites that describe advancements in the field since the book s publication
