Rethinking Human Evolution Jeffrey H. Schwartz, 2018-02-02 Contributors from a range of disciplines consider the disconnect between human evolutionary studies and the rest of evolutionary biology The study of human evolution often seems to rely on scenarios and received wisdom rather than theory and methodology with each new fossil or molecular analysis interpreted as supporting evidence for the presumed lineage of human ancestry We might wonder why we should pursue new inquiries if we already know the story Is paleoanthropology an evolutionary science Are analyses of human evolution biological In this volume contributors from disciplines that range from paleoanthropology to philosophy of science consider the disconnect between human evolutionary studies and the rest of evolutionary biology All of the contributors reflect on their own research and its disciplinary context considering how their fields of inquiry can move forward in new ways The goal is to encourage a more multifaceted intellectual environment for the understanding of human evolution Topics discussed include paleoanthropology s history of procedural idiosyncrasies the role of mind and society in our evolutionary past humans as large mammals rather than a special case genomic analyses computational approaches to phylogenetic reconstruction descriptive morphology versus morphometrics and integrating insights from archaeology into the interpretation of human fossils Contributors Markus Bastir Fred L Bookstein Claudine Cohen Richard G Delisle Robin Dennell Rob DeSalle John de Vos Emma M Finestone Huw S Groucutt Gabriele A Macho Fabrizio Mc Manus Apurva

Narechania Michael D Petraglia Thomas W Plummer J W F Reumer Jeff Rosenfeld Jeffrey H Schwartz Dietrich Stout Ian Tattersall Alan R Templeton Michael Tessler Peter J Waddell Martine Zilversmit **Paleontology and Geology of Laetoli: Human Evolution in Context** Terry Harrison, 2011-01-27 This volume 2 and its companion volume 1 present the results of new investigations into the geology paleontology and paleoecology of the early hominin site of Laetoli in northern Tanzania. The site is one of the most important paleontological and paleoanthropological sites in Africa worldrenowned for the discovery of fossils of the early hominin *Australopithecus afarensis* as well as remarkable trails of its footprints. The first volume provides new evidence on the geology geochronology ecology ecomorphology and taphonomy of the site. The second volume describes newly discovered fossil hominins from Laetoli belonging to *Australopithecus afarensis* and *Paranthropus aethiopicus* and presents detailed information on the systematics and paleobiology of the diverse associated fauna. Together these contributions provide one of the most comprehensive accounts of a fossil hominin site and they offer important new insights into the early stages of human evolution and its context. [African Paleoecology and Human Evolution](#) Sally C. Reynolds, René Bobe, 2022-06-09 Humans evolved in the dynamic landscapes of Africa under conditions of pronounced climatic geological and environmental change during the past 7 million years. This book brings together detailed records of the paleontological and archaeological sites in Africa that provide the basic evidence for understanding the environments in which we evolved. Chapters cover specific sites with comprehensive accounts of their geology paleontology paleobotany and their ecological significance for our evolution. Other chapters provide important regional syntheses of past ecological conditions. This book is unique in merging a broad geographic scope all of Africa and deep time framework the past 7 million years in discussing the geological context and paleontological records of our evolution and that of organisms that evolved alongside our ancestors. It will offer important insights to anyone interested in human evolution including researchers and graduate students in paleontology archaeology anthropology and geology. *Dental Perspectives on Human Evolution* Shara E. Bailey, Jean-Jacques Hublin, 2007-08-20 The objective of the volume is to bring together in one collection the most innovative dental anthropological research as it pertains to the study of hominid evolution. In the past few decades both the numbers of hominid dental fossils and the sophistication of the techniques used to analyze them have increased substantially. The book's contributions focus on dental morphometrics growth and development diet and dental evolution. [Hominin Postcranial Remains from Sterkfontein, South Africa, 1936-1995](#) Bernhard Zipfel, Brian G. Richmond, Carol V. Ward, 2020-05-07 This volume is the first source to present an in depth analysis of postcranial fossils allowing readers to cross compare standardized data for themselves. **Human Evolution and the Origins of Hierarchies** Benoît Dubreuil, 2010-09-06 In this book Benoît Dubreuil explores the creation and destruction of hierarchies in human evolution. Combining the methods of archaeology anthropology cognitive neuroscience and primatology he offers a natural history of hierarchies from the point of view of both cultural and biological evolution. This volume explains why dominance hierarchies

typical of primate societies disappeared in the human lineage and why the emergence of large scale societies during the Neolithic period implied increased social differentiation the creation of status hierarchies and eventually political centralisation **Interchange** ,1978 **The First Humans** Frederick E. Grine,John G Fleagle,Richard E.

Leakey,2009-05-24 There are some issues in human paleontology that seem to be timeless Most deal with the origin and early evolution of our own genus something about which we should care Some of these issues pertain to taxonomy and systematics How many species of Homo were there in the Pliocene and Pleistocene How do we identify the earliest members the genus Homo If there is more than one Plio Pleistocene species how do they relate to one another and where and when did they evolve Other issues relate to questions about body size proportions and the functional adaptations of the locomotor skeleton When did the human postcranial Bauplan evolve and for what reasons What behaviors and what behavioral limitations can be inferred from the postcranial bones that have been attributed to Homo habilis and Homo erectus Still other issues relate to growth development and life history strategies and the biological and archeological evidence for diet and behavior in early Homo It is often argued that dietary change played an important role in the origin and early evolution of our genus with stone tools opening up scavenging and hunting opportunities that would have added meat protein to the diet of Homo Still other issues relate to the environmental and climatic context in which this genus evolved **Human**
