Trust Extension as a Mechanism for Secure Code Execution on Commodity Computers Bryan Jeffrey Parno, 2014-06-01 As society rushes to digitize sensitive information and services it is imperative to adopt adequate security protections However such protections fundamentally conflict with the benefits we expect from commodity computers In other words consumers and businesses value commodity computers because they provide good performance and an abundance of features at relatively low costs Meanwhile attempts to build secure systems from the ground up typically abandon such goals and hence are seldom adopted In this book I argue that we can resolve the tension between security and features by leveraging the trust a user has in one device to enable her to securely use another commodity device or service without sacrificing the performance and features expected of commodity systems At a high level we support this premise by developing techniques to allow a user to employ a small trusted portable device to securely learn what code is executing on her local computer Rather than entrusting her data to the mountain of buggy code likely running on her computer we construct an on demand secure execution environment which can perform security sensitive tasks and handle private data in complete isolation from all other software and most hardware on the system Meanwhile non security sensitive software retains the same abundance of features and performance it enjoys today Having established an environment for secure code execution on an individual computer we then show how to extend trust in this environment to network elements in a secure and efficient manner This allows us to reexamine the design of network protocols and defenses since we can now execute code on endhosts and trust the results within the network Lastly we extend the user's trust one more step to encompass computations performed on a remote host e g in the cloud We design analyze and prove secure a

protocol that allows a user to outsource arbitrary computations to commodity computers run by an untrusted remote party or parties who may subject the computers to both software and hardware attacks Our protocol guarantees that the user can both verify that the results returned are indeed the correct results of the specified computations on the inputs provided and protect the secrecy of both the inputs and outputs of the computations These guarantees are provided in a non interactive asymptotically optimal with respect to CPU and bandwidth manner Thus extending a user s trust via software hardware and cryptographic techniques allows us to provide strong security protections for both local and remote computations on sensitive data while still preserving the performance and features of commodity computers

THE CONSTITUTIONAL LANDSCAPE IN CONTEMPORARY CHINA Qianfan Zhang (张倩帆, 2024-05-30) In the past two decades China has endured together with the rest of the world two pandemics originating in Guangdong and Wuhan While the severity and management of these pandemics varied they both stemmed from the same root cause the absence of constitutional enforcement and protection of fundamental rights such as freedom of speech and press In the global village today especially given China s size and impact the Chinese constitutional democracy is critical not only for China itself but also for the whole world Largely following China s current 1982 Constitution this book aims to produce a contemporary landscape of Chinese constitutional developments in essentially all major areas Despite the lack of constitutional enforcement and serious backlashes in recent years the author believes that the Constitution still matters as China has achieved significant de facto progress in human rights and the rule of law since its Reform and Opening in 1978 Particularly increasing number of citizens are becoming aware of their constitutional rights which they are eager to defend in their interest Ultimately the future of China and the world depends on the efforts of the people themselves to promote its constitutional reforms and enforcement
