

Lumbar/Core Strength and Stability Exercises

Introduction

Low back pain can be the result of many different things. Pain can be triggered by some combination of overuse, muscle strain, and/or injuries to the muscles, ligaments, and discs that support the spine. Over time, a muscle injury that has not been managed correctly may lead to an overall imbalance in the spine. This can lead to constant tension on the muscles, ligaments, bones, making the back more prone to injury or re-injury.

Since low back pain can be caused by injury to various structures in the spine and its supporting structures, it is

important to consult your physician or athletic trainer if you have had back pain lasting longer than 1-2 weeks. Your physician can provide a diagnosis and explain what structure is injured so that your physical therapist or athletic trainer can guide you as to which exercises are appropriate for your specific injury. Each diagnosis are treated with different protocols, therefore it is important that you consult a medical professional before beginning any strenuous rehabilitation program. Low back exercises and flexibility can be the best treatment option for almost all types of back problems as it is likely to help restore balance in the spine.

Low back exercises concentrate on strengthening with the abdominal muscles, to be able to give stabilization of the spine. Rehabilitation

programs or preventative rehabilitation programs that focus on strengthening lumbar muscles combined with core stability and proprioception will reduce the risk of low back pain if exercises are done correctly, and on a regular basis.

The Lumbar/Core Strength and Stability Program below can be utilized as a preventative rehabilitation program or if you are recovering from an injury. The program includes a flexibility and strengthening section. Flexibility should be done at least 5 times a week, and the strengthening section should be done 3-4 times a week. The program is divided into levels "Easy", "Medium", and "Difficult". It is recommended to start with the "Easy" exercises, and perfect them before moving onto "Medium" or "Difficult".

Please take the time to overview the information below before beginning the Lumbar/Core Strength and Stability Program. It is important to understand the way certain muscles work, and how the exercises should feel in order to know if you are doing the exercises correctly.

What is my "core"?

The "core" is comprised of several groups of muscles including the transversus abdominus, multifidus, diaphragm and pelvic floor muscles. These muscles work together to produce maximum stability in the abdominal and lumbar (lower) back region, as well as coordinate the movement of the arms, legs, and spine. Engaging these muscles is not something that most people do consciously, therefore it is important to learn how to effectively co-contract these muscles while performing these rehabilitation exercises.

How do I engage my core?

Place two fingers on the bones on the front of your hips (ASIS). Move

your hands in an inch towards your belly button and down an inch towards your toes. You should now be directly over the transversus abdominus muscle. When you contract your core correctly, you should feel a gentle tightening under your fingers, as if you took in your belt one extra notch. If the muscles under your fingers start to "dome", then you are contracting too much and compensating with larger muscle groups. It is important to learn how to engage your core in various positions and well as during activity to provide maximum stability for your spine.

FLEXIBILITY

A lack of flexibility through the hips (hamstring, hip flexors, gluteus muscles) can contribute to low back pain, therefore it is important to work on this if you are experiencing back pain. Please make sure all stretches are "pain free". If you feel discomfort, you may not be ready to do that specific stretch.

1- Quadriceps Stretch

Using a towel, or band, lie on your stomach, attach the band to affected foot and pull your heel to your butt. Hold this stretch for 1 min. Repeat 3 times.

Functional Rehabilitation of Low Back Pain with Core Stabilization Exercises Joshua Johnson,2012 Introduction Low back pain is very common in the adult population and accounts for more time lost from work than other diagnoses It also affects athletes at all different levels of competition and results in missed practice and game time Diagnosing and treating a specific pathology is often difficult and because clinical evaluation and radiologic studies are often unable to find a root cause A popular treatment approach with a high volume of anecdotal evidence is the use of core stabilization exercise in the treatment of low back pain Purpose To evaluate exercise as a treatment for low back pain with a specific emphasis on core stabilization and provide an outline of exercises and progression to help clinicians in treating the athlete with low back pain Methods A search of electronic databases was performed including PubMed SPORTDiscus Google Scholar and Cochran Databases Key Words used Lumbar stabilization core stabilization low back pain athletes exercise and core strengthening and any combination of these words Exercises and Progressions Based on the search of electronic databases their does

appear to be some efficacy established in the general population of core stabilization exercises However at this time does not appear to be superior to other exercise interventions There are no specific studies involving athletes so evidence based treatment of athletes using core stabilization is limited The literature seems to establish a need for total core muscle recruitment to stabilize the spine and does not identify one specific a need for total core muscle recruitment to stabilize the spine and does not identify one specific muscle as being critical for spinal stability The program designed is based on firing of the entire core muscular to stabilize the spine with an emphasis to functional movements that imitate sport like situations The exercises chosen were based on how effectively they challenge the muscle groups without causing loads that may be detrimental to recovery and pain free movement Conclusion Due to the demands placed on the athlete s lumbar vertebrae spinal instability may be a significant source of pain in athlete not diagnosed with other pathologies While at this time there is insufficient evidence to support or refute the use of stabilization exercise in the treatment of low back pain in athlete s this paper hopefully gives insight into some exercises that may be used to reestablish core muscle strength and endurance
