Matthew J. Wolf-Meyer,2019-04-15 Can social theories forge new paths into an uncertain future The future has become
increasingly difficult to imagine We might be able to predict a few events but imagining how looming disasters will coincide
is simultaneously necessary and impossible Drawing on speculative fiction and social theory Theory for the World to Come is
the beginning of a conversation about theories that move beyond nihilistic conceptions of the capitalism caused
Anthropocene and toward generative bodies of thought that provoke creative ways of thinking about the world ahead
Matthew J Wolf Meyer draws on such authors as Kim Stanley Robinson and Octavia Butler and engages with afrofuturism
indigenous speculative fiction and films from the 1970s and 80s to help think differently about the future and its possibilities
Forerunners Ideas First Short books of thought in process scholarship where intense analysis questioning and speculation
take the lead Contemporary Futurist Thought Thomas Lombardo,2006-06-23 Contemporary Futurist Thought describes
recent thinking about the future dealing with both the hopes and the fears expressed in modern times concerning what
potentially lies ahead There are many such hopes and fears perhaps an overpowering number competing with each other and
swirling about in the collective mind of humanity Psychologist and futurist Tom Lombardo describes this mental universe of
inspiring dreams and threatening premonitions regarding the future The book begins with an in depth examination of the
highly influential literary genre of science fiction which Dr Lombardo identifies as the mythology of the future He next
describes the modern academic discipline of future studies which attempts to apply scientific methods and principles to an
understanding of the future Social and technological trends in the twentieth century are then reviewed setting the stage for
an analysis of the great contemporary transformation occurring in our present world Given the powerful and pervasive
changes taking place across the globe and throughout all aspects of human life the questions arise Where are we potentially
heading and perhaps more importantly where should we be heading The final chapter provides an extensive review of
different answers to these questions Describing theories and approaches that highlight science technology culture human
psychology and religion among other areas of focus as well as integrative views which attempt to provide big pictures of all

aspects of human life the book provides a rich and broad overview of contemporary ideas and visions about the future In the conclusion Dr Lombardo assesses and synthesizes these myriad perspectives proposing a set of key ideas central to understanding the future This book completes the study of future consciousness begun in its companion volume *The Evolution of Future Consciousness* These two volumes rich in historical detail and concise observations on the interrelatedness of a wide range of interdisciplinary topics are a significant contribution to the field of future studies and a valuable resource for educators consultants and anyone wishing to explore the significance of thinking about the future

The Mind As a Scientific Object Christina E. Erneling,David M. Johnson,2005-01-13 What holds together the various fields that are supposed to constitute the general intellectual discipline that people now call cognitive science In this book Erneling and Johnson identify two problems with defining this discipline First some theorists identify the common subject matter as the mind but scientists and philosophers have not been able to agree on any single satisfactory answer to the question of what the mind is Second those who speculate about the general characteristics that belong to cognitive science tend to assume that all the particular fields falling under the rubric psychology linguistics biology and son on are of roughly equal value in their ability to shed light on the nature of mind This book argues that all the cognitive science disciplines are not equally able to provide answers to ontological questions about the mind but rather that only neurophysiology and cultural psychology are suited to answer these questions However since the cultural account of mind has long been ignored in favor of the neurophysiological account Erneling and Johnson bring together contributions that focus especially on different versions of the cultural account of the mind
