Modern Technology of Synthetic Resins & Their Applications (2nd Revised Edition) NIIR Board, 2018-04-20

Synthetic resin is typically manufactured using a chemical polymerization process This process then results in the creation of polymers that are more stable and homogeneous than naturally occurring resin Since they are more stable and are cheaper various forms of synthetic resin are used in a variety of products such as plastics paints varnishes and textiles There are various kinds of synthetic resins acetal resins amino resins casein resins epoxy resins hydrocarbon resins polyamide resins etc The classic variety is epoxy resin manufactured through polymerization used as a thermoset polymer for adhesives and composites Epoxy resin is two times stronger than concrete seamless and waterproof Polyamide resin is another example of synthetic resins Polyamide resins are products of polymerization of an amino acid or the condensation of a diamine with a dicarboxylic acid They are used for fibers bristles bearings gears molded objects

coatings and adhesives The term nylon formerly referred specifically to synthetic polyamides as a class Because of many applications in mechanical engineering nylons are considered engineering plastics Resins are valued for their chemical properties and associated uses such as the production of varnishes adhesives lacquers paints rubber and pharmaceutical uses The applications of synthetic resins are seen in some important industries like paint industry adhesive industry the printing ink industry the textile industry the leather industry the floor polish paper agricultural industry etc As it can be seen that there is an enormous scope of application of resins hence it is one of the major field to venture Synthetic Resins are materials with properties similar to natural plant resins They are viscous liquids capable of hardening permanently Chemically they are very different from resinous compounds secreted by plants Synthetic resins are of several classes The growth of the synthetic resins market can be attributed to the high demand from the packaging sector due to favorable properties including lightweight and ability to act as an excellent barrier which allows for their usage in applications such as barrier packaging shrink wraps and pharmaceutical packaging The major contents of the book are properties manufacturing process formulae of synthetic resins and applications of synthetic resins derivatives of resins use of resins in polymer field alkyd resin technology epoxy resins manufacture of polystyrene based ion exchange phenol formaldehyde reactions polycarbonates resins polyester coating compositions synthetic rubbers modification with synthetic resins water soluble polymers cross linking of water soluble coatings etc This book also contains the list of manufacturers and dealers of raw materials list of Chemical Plant Photographs of Machinery with Suppliers Contact Details Sample Plant Layout and Process Flow Chart The book will be very useful for new entrepreneurs manufacturers of synthetic resins who can easily extract the relevant formulation and manufacturing process from the book TAGS Alkyl and hydroxy alkyl alkylcellulose Applications of Synthetic Resins Best small and cottage scale industries Business Plan for a Startup Business Business start up Emulsion polymers manufacture Formulation of Synthetic Resins Formulation of Resins Great Opportunity for Startup How to Manufacture Synthetic Resins How to start a successful synthetic resin business How to start a synthetic resin production Business How to start a synthetic resin production How to Start Emulsions of Synthetic Resin Business How to start synthetic resin production Industry in India Indene coumarone resins Manufacturing process of Acrylonitrile Resins Manufacturing process of Actel Resins Manufacturing process of Alkyd Resin Manufacturing process of Amino Resins Manufacturing process of Casein Resins Manufacturing process of Epoxy Resins Manufacturing process of Ion exchange Resins Manufacturing process of Phenolic resins Manufacturing process of Polyamide Resins Manufacturing process of Polycarbonates Resins Manufacturing process of Polyesters Manufacturing process of Polyurethane resins Manufacturing process of Polyvinyl Acetate Solid Resins Manufacturing process of Silicone resins Modern small and cottage scale industries Most Profitable Synthetic resin Business Ideas New small scale ideas in synthetic resin production industry Process of making synthetic resin adhesive Processing of synthetic resin Production of a synthetic resin Profitable small and cottage scale industries Profitable

Glass and Ceramics Technology (2nd Revised Edition)** NIIR Board of Consultants & Engineers, 2017-04-09 Ceramics
also known as fire clay is an inorganic non metallic solid article which is produced by the art or technique of heat and
subsequent cooling The ceramics industry in India came into existence about a century ago and has matured over time to
form an industrial base From traditional pottery making the industry has evolved to find its place in the market for
sophisticated insulators electronic and electrical items The ceramic industry has been modernizing continuously by newer
innovations in product design quality etc Glass is an inorganic product typically produced by melting a mixture of silica soda
and calcium compound with desired metallic oxides that serves as coloring agents Indian glass industry will increase on the
sidelines of real estate growth across retail residential and office estate Glass production involves the fusion of several
inorganic substances These various substances include products such as silica sand soda ash dolomite and limestone
representing together 99% of all the raw materials excluding recycled glass Glass ceramics are mostly produced in two steps
First a glass is formed by a glass manufacturing process The glass is cooled down and is then reheated in a second step In
this heat treatment the glass partly crystallizes In most cases nucleation agents are added to the base composition of the
glass ceramic These nucleation agents aid and control the crystallization process Glass ceramics are fine grained
polycrystalline materials formed when glasses of suitable compositions are heat treated and thus undergo controlled
crystallization to the lower energy crystalline state It is important to emphasize a number of points in this statement on glass
ceramics Glass ceramics has helped the electronics industry build much smaller and highly efficient transistors leading to
advances in all types of devices The book covers almost all important aspects of Glass and Ceramic Industry Properties
Applications Manufacturing Processing and Photographs of Plant Machinery with Supplier s Contact Details The major
contents of the book are types of glasses silicate glasses boric oxide and borate glasses phosphorus pentoxide and phosphate
glasses germanium dioxide and germanate glasses titanate glasses nitrate glasses glasses based on water halide glasses
