Popescu,Chotchai Charoenngam,1995-03-20 Critical Path Method CPM and Performance Evaluation and Review Technique PERT are widely recognized as the most effective methods of keeping large complex construction projects on schedule under budget and up to professional standards But these methods remain underused because they are poorly

understood and due to a host of unfamiliar terms and applications may seem more complicated than they really are. This encyclopedia brings together in one comprehensive volume all terms, definitions and applications related to the time and cost management of construction projects. While many of these terms refer to ancient and venerable building practices, others have evolved quite recently and refer specifically to modern construction and management techniques. Sources include hundreds of professional books, trade journals and research publications as well as planning and scheduling software vendor literature. The detailed glossary of all applicable terms includes across-referenced listing of examples that describe real world applications for each term supplied. An extensive bibliography covers all applicable books, articles and periodicals available on project planning, scheduling and control using CPM and related subjects. This book is an important quick reference and desktop information resource for construction planners, schedulers and controllers as well as civil engineers and project managers. It is also the ultimate research tool for educators, students or anyone who seeks to improve their understanding of the management of modern construction projects.

Routledge Handbook of Smart Built Environment
Weisheng Lu, Chimay J. Anumba, 2025-03-20

The primary aim of this edited volume is to document the current theories, best practices and technological advancements in the move towards a Smart Built Environment (SBE). The needs to accelerate towards the SBE are numerous and include: Increasing complexities and the need for interconnectivity within the built environment e.g. mega infrastructure projects; Data driven decision making resulting in higher demand from clients e.g. smart design, construction operation and end of life (EOL); High requirements from stakeholders e.g. system efficiency, environmental performance, green procurement; Fast paced technological advancement and integration; Natural disaster resilience of the built environment e.g. prediction, smart control of building component; Sustainability issues around the built environment. In this book, the interrelationships among the various lifecycle stages (design, construction, operation and EOL), the collective benefit of synergy at building level, multi infrastructure level and city level as well as the ultimate goals in relation to the deployment of smart technologies in the industry are addressed. Part I covers smart design and construction; Part II smart living and operation; and Part III broadens the scope to the whole smart city. Chapters examine how smart technologies can improve the effectiveness, productivity and efficiency of the built environment. An overview of theories and practices that are enabled by innovations and technologies for developing the SBE. The basis for new research agenda, new concepts and frameworks for future development. This handbook documents the current theories, practices and technologies and develops a holistic approach for research and practice by adopting a multidimensional outlook for the SBE. It is an essential reference.
