Scholl, 2003-06-26 This book constitutes the refereed proceedings of the International Workshop on Spatio Temporal Database Management Systems STDBM 99 held in Edinburgh UK in September 1999 as a satellite event of VLDB 99 The 13 revised full papers presented were carefully selected from 30 papers submitted The book offers topical sections on understanding and manipulating spatio temporal data integration exchange and visualization query processing index evaluation and constraints and dependencies

Computational Artifacts Raymond Turner, 2018-07-11 The philosophy of computer science is concerned with issues that arise from reflection upon the nature and practice of the discipline of computer science This book presents an approach to the subject that is centered upon the notion of computational artefact It provides an analysis of the things of computer science as technical artefacts Seeing them in this way enables the application of the analytical tools and concepts from the philosophy of technology to the technical artefacts of computer science With this conceptual framework the author examines some of the central philosophical concerns of computer science including the foundations of semantics the logical role of specification the nature of correctness computational ontology and abstraction formal methods computational epistemology and explanation the methodology of computer science and the nature of computation The book will be of value to philosophers and computer scientists

Implementation of Functional Languages Chris Clack, Kevin Hammond, Tony Davie, 1998-08-26 This book constitutes the thoroughly refereed post workshop proceedings of the 9th International Workshop on Implementation of Functional Languages IFL 97 held in St Andrews Scotland UK in September 1997 The 21 revised full papers presented were selected from the 34 papers accepted for presentation at the workshop during a second round of thorough a posteriori reviewing The book is divided in sections on compilation types benchmarking and profiling parallelism interaction language design and garbage collection

Programming Languages Kenneth C. Loudon, 2003 This text provides students with an overview of key issues in the study of programming languages Rather than focus on individual language issues Kenneth Loudon focuses on language paradigms and concepts that are common to all languages

Distributed Systems George F. Coulouris, Jean Dollimore, Tim Kindberg, 2001 The chapters in this new edition have been revised and updated New material includes coverage of large scale applications fault modelling and fault tolerance models of system execution object orientation and distributed multimedia systems

Introduction to Expert Systems Peter Jackson, 1999 In May 1997 IBM s Deeper Blue defeated the world chess champion Gary Kasparov showing that an artificial intelligence system can outplay even the most skilled of human experts Since the first expert systems appeared in the late sixties we have seen three decades of research and development engineer human knowledge to more practical ends in a pioneering effort that has integrated diverse areas of cognitive and computer science Today expert systems exist in many forms from medical diagnosis to investment analysis and from counseling to production control This third edition of Peter Jackson s best selling book updates the technological base of expert systems research and embeds those developments in a wide variety of application areas The earlier chapters have been refocused to take a more practical approach to the basic topics while the later chapters introduce new topic areas such as case based reasoning connectionist systems and hybrid systems Results in related areas such as machine learning and reasoning with uncertainty are also accorded a thorough treatment The new edition contains many new examples and exercises most of which are in CLIPS a language that combines production rules with object oriented programming LISP

PROLOG and C are also featured where appropriate Interesting problems are posed throughout and are solved in exercises involving the analysis design and implementation of CLIPS programs This book will prove useful to a wide readership including general readers students and teachers software engineers and researchers Its modular structure enables readers to follow a pathway most suited to their needs providing them with an up to date account of expert systems technology Peter Jackson is Director of Research at West Group a division of The Thomson Corporation and the leading provider of information to the US legal market Peter drives the application of natural language and information retrieval technologies to the information needs of law and business Previous appointments include Principal Scientist at the McDonnell Douglas Research Laboratories in Saint Louis Missouri and Lecturer in the Department of Artificial Intelligence at the University of Edinburgh Scotland

Smart Legal Contracts Jason Allen,Peter Hunn,2022-04-04 Smart Legal Contracts

Computable Law in Theory and Practice is a landmark investigation into one of the most important trends at the interface of law and technology the effort to harness emerging digital technologies to change the way that parties form and perform contracts While developments in distributed ledger technology have brought the topic of smart contracts into the mainstream of legal attention this volume takes a broader approach to ask how computers can be used in the contracting process This book assesses how contractual promises are expressed in software and how code based artefacts can be incorporated within more conventional legal structures With incisive contributions from members of the judiciary legal scholars practitioners and computer scientists this book sets out to frame the borders of an emerging area of law and start a more productive dialogue between the various disciplines involved in the evolution of contracts as software It provides the first step towards a more disciplined approach to computational contracts that avoids the techno legal ambiguities of smart contracts and reveals an emerging taxonomy of approaches to encoding contracts in whole or in part Conceived and written during a time when major legal systems began to engage with the advent of contracts in computable form and aimed at a fundamental level of enquiry this collection will provide essential insight into future trends and will provide a point of orientation for future scholarship and innovation
