

(1) Software & Software Engineering

Software:

- Computer software is the product that software professionals build and then support over the long term.
- It encompasses programs that execute within a computer of any size and architecture, content that is presented as the computer programs execute, and descriptive information in both hard copy and virtual forms that encompass virtually any electronic media.

Characteristics of software :

[1] **Software is developed or engineered:** it is not manufactured in the classical sense:

- Although some similarities exist between software development and hardware manufacturing, but few activities are fundamentally different.
- In both activities, high quality is achieved through good design, but the manufacturing phase for hardware can introduce quality problems than software.

[2] **Software doesn't wear out :**

- Hardware components suffer from the growing effects of dust, vibration, abuse, temperature extremes, and many other environmental maladies. Stated simply, the hardware begins to wear out.
- Software is not susceptible to the environmental maladies that cause hardware to wear out. In theory, therefore, the failure rate curve for software should take the form of the "idealized curve".
- When a hardware component wears out, it is replaced by a spare part.
- There are no software spare parts.
- Every software failure indicates an error in design or in the process through which design was translated into machine executable code.
- Therefore, the software maintenance tasks that accommodate requests for change involve considerably more complexity than hardware maintenance.
- However, the implication is clear—software doesn't wear out. But it does deteriorate.

Emotion, Personality and Cultural Aspects in Crowds Rodolfo Migon Favaretto, Soraia Raupp Musse, Angelo Brandelli Costa, 2019-08-29 This practically focused book presents a computational model for detection and analysis of pedestrian features in crowds from video sequences The study of human behavior is a subject of great scientific interest and probably an inexhaustible source of research The analysis of pedestrians and groups in crowds is relevant in several areas of application such as security entertainment environmental and public spaces planning and social sciences Cultural and personality aspects are attributes that can influence personal behavior and affect the group in which individuals belong In this sense we consider different ways of characterizing individuals and groups in crowds with respect to their relationship with the geometrical space and time We discuss and describe an approach to extract and analyse from the Computer Science point of view emotions personalities and cultural aspects from crowds and groups of pedestrians using Computer Vision techniques Extracting characteristics from real pedestrians and crowds benefits other areas such as architecture and design planning spaces to maximize pedestrian and group environment fit security and surveillance design of evacuation plans considering characteristics of the crowds and detection of abnormal events entertainment more realistic crowds in movies and games reproducing characteristics from real pedestrians and crowds social sciences understanding of human behavior among others A big challenge in this area of research is the comparison with real life data In this book we successfully compared the results of the proposed approach with Psychology literature where several studies aimed to analysis human behavior

Computational Modeling of Multilevel Organisational Learning and Its Control Using Self-modeling Network Models Gülay Canbaloğlu, Jan Treur, Anna Wiewiora, 2023-06-16 Although there is much literature on organisational learning mathematical formalisation and computational simulation there is no literature that uses mathematical modelling and simulation to represent and explore different facets of multilevel learning This book provides an overview of recent work on mathematical formalisation and computational simulation of multilevel organisational learning by exploiting the possibilities of self modeling network models to address it This is the first book addressing mathematical formalisation and computational modeling of multilevel organisational learning in a systematic principled manner A self

modeling network modeling approach from AI and Network Science is used where in a reflective manner some of the network nodes called self model nodes represent parts of the network s own network structure characteristics This is supported by a dedicated software environment allowing to design and implement higher order adaptive network models by specifying them in a conceptual manner at a high level of abstraction in a standard table format without any need of algorithmic specification or programming This modeling approach allows to model the development of knowledge in an organisational setting in a neatly structured manner at three different levels for the usage adaptation and control respectively of the underlying mental models Several examples of realistic cases of multilevel organisational learning are used to illustrate the approach Crucial concepts such as the aggregation of mental models to form shared mental models out of individual mental models are addressed extensively It is shown how to model context sensitive control of organisational learning taking into account a wide variety of context factors for example relating to levels of expertise of individuals or to leadership styles of managers involved Mathematical equilibrium analysis of models of organisational learning is also addressed among others allowing verification of correctness of the implemental models in comparison to their conceptual design Chapters in this book also contribute to the Management and Business Sciences research by demonstrating how computational modeling can be used to capture complex management phenomena such as multilevel organizational learning This book has a potential implication for practice by demonstrating how computational modeling can be used to capture learning scenarios which then provide a basis for more informed managerial decisions
