are woven throughout the book optimization or trying to do the best we can managing tradeoffs between conflicting
objectives and dealing with uncertainty After a brief introduction the text reviews the fundamentals of probability including
commonly used discrete and continuous distributions and functions of a random variable The next major section beginning in
Chapter 7 examines optimization The key fundamentals of optimization inputs decision variables objective s and constraints
are introduced Optimization is applied to linear regression basic inventory modeling and the newsvendor problem which
incorporates uncertain demand Linear programming is then introduced We show that the newsvendor problem can be cast as
a network flow linear programming problem Linear programming is then applied to the problem of redistributing empty
rental vehicles e g bicycles at the end of a day and the problem of assigning students to seminars Several chapters deal with
location models as examples of both simple optimization problems and integer programming problems The next major section
focuses on queueing theory including single and multi server queues This section also introduces a numerical method for
solving for key performance metrics for a common class of queueing problems as well as simulation modeling Finally the text
ends with a discussion of decision theory that again integrates notions of optimization tradeoffs and uncertainty analysis The
