

Question:

A mass of 2.0 kg is attached to the end of a light cord to make a pendulum 5.0 meters in length. The mass is raised to an angle of 53° relative to the vertical, as shown, and released. The speed of the mass at the bottom of its swing is:

- a. 60 m/s
- b. 7.7 m/s
- c. 40 m/s
- d. 6.3 m/s
- e. 10 m/s

©2009, Richard White. LearnAPphysics.com

Answer:

The correct answer is *d*. This is a conservation of energy problem, with the gravitational potential energy U of the pendulum bob converted to kinetic energy K as it swings down. Let's consider the lowest position of the pendulum to be $h = 0$:

$$U_i + K_i = U_f + K_f$$

$$mgh + 0 = 0 + \frac{1}{2}mv^2$$

$$v = \sqrt{2gh}$$

We can find the height of the pendulum bob relative to the bottom of its swing by using trigonometry. The length of the short side of the triangle (shown in red) is $L \cos 53^\circ$. The height h is the full length L less this leg of the triangle.

$$h = L - L \cos \theta = 5 - 5 \cos 53^\circ = 2\text{ m}$$

We can then use this information in our original formula to determine the velocity at this point:

$$v = \sqrt{2gh} = \sqrt{2(10\text{ m/s}^2)(2\text{ m})} = 6.3\text{ m/s}$$

300 Creative Physics Problems with Solutions Laszlo Holics, 2011 This collection of exercises compiled for talented high school students encourages creativity and a deeper understanding of ideas when solving physics problems Described as far beyond high school level this book grew out of the idea that teaching should not aim for the merely routine but challenge pupils and stretch their ability through creativity and thorough comprehension of ideas **50 Unique Physics Problems**

, 2021-02-28 This book is a short compilation of physics problems based primarily on high school physics courses but involves a good deal of in depth questioning Many of the problems have been adapted across the major physics topics to serve a multidisciplinary approach to the problem solving process and would require a good understanding of the corresponding governing laws and equations apart from intuition and adept mathematical flair This book will prove to be fun and challenging and is recommended for the aspiring high school physics student **The American Mathematical Monthly**
