relativity theories affected some of the most fundamental notions of physical thinking such as matter radiation space and
time This transition thus represents a challenge for any attempt to understand the structures of a scientific revolution The
present four volume work aims at a comprehensive account of the way in which the work of Albert Einstein and his
contemporaries changed our understanding of space time and gravitation The conceptual framework of classical nineteenth
century physics had to be fundamentally restructured and reinterpreted in order to arrive at a theory of gravitation
compatible with the new notions of space and time established in 1905 by Einstein's special theory of relativity Whereas the
classical theory of gravitation postulated an instantaneous action at a distance Einstein's new relativistic kinematics rather
suggested an analogy between the gravitational field and the electromagnetic field propagating with a finite speed It is therefore
not surprising that Einstein was not alone in addressing the problem of formulating a theory of gravitation that complies with
the kinematics of relativity theory The analysis of these alternative approaches as well as of earlier alternative approaches to
gravitation within classical physics turns out to be crucial for identifying the necessities and contingencies in the actual
