respond to changes and situations that arise during the project management process is one of the key functional approaches of the Agile process. Scrum represents one of those Agile methodologies that provide such leverage for project handlers and participants to these demanding business requirements. Software development methodologies have advanced since business requirements became more demanding. With the fast pace of business change in the 21st century, many projects need to be sure they will deliver something that meets client needs at the end of the project and not expend wasted effort refining requirements that will be out of date by the time the end product is delivered. Even in business environments that do not change rapidly, it can be difficult to fully articulate requirements without seeing a tangible product first, so there is still the risk of delivering something that doesn't quite meet the client's needs. That is why agile is becoming increasingly necessary for many different types of projects. Agile development focuses majorly on adding value to customers. Scrum is developed to mimic a cooperative rugby strategy which promotes synergy and collaboration among team members even when working at distance. Scrum is technically not a project management framework but a methodology which allows software developers to inspect and adapt. Scrum Quickstart Guide Ed Stark, 2014-10-29 1 Amazon Best Seller, The Ultimate Guide To Mastering Scrum Methodology Implementing In Your Organization. Completing a project as a team is one of the fundamental elements of the current professional climate. Internal and external projects ranging from the IT sector to the construction development working together efficiently and effectively is a common challenge faced by almost every organization. Fortunately, management architects have developed multiple strategies to tackle projects, one of the most highly adopted being the Scrum method. Differing greatly from the traditional waterfall or relay approach to project management methodology, Scrum emphasizes the importance of a cross functional team that pushes forward together to a collective goal, the project success. Implementing such tactics as Daily Scrums in which all members of the team are held accountable for their accomplishments, current tasks and potential obstacles, Scrum attempts to create a real team amongst all members where all individuals most move forward together as occurs within a Scrum on the Rugby Field from which the term was adopted. The holistic approach taken by Scrum not only embraces the importance of progressing as a team, it also raises several important questions that
